

Appendix to the guide for risk estimation – List of reference F1 tables

At the time of the publication of the framework it was possible to establish a first list of reference F1 tables allowing interested users of the framework to estimate the frequency of all freight transport events that are considered as an input to the estimation of the frequencies of DG scenarios as described in section 7.5 of the Guide for risk estimations.

Important note:

This appendix will be regularly supplemented with new reference material and updated on the basis of the change requests sent to the EUDG in accordance with the process reported in section 6 of the Framework guide.

Updates of the following reference material may be found by the users of the framework on the dedicated Inland TDG webpage of ERA website.

EU region			
Contributor	Roads	Railways	Inland waterways
	(no reference material available)	EU_F1_RL	(no reference material available)

FR			
Contributor	Roads	Railways	Inland waterways
	(no reference material available)	FR_F1_RL	(no reference material available)
