

**MINISTRY OF JUSTICE OF THE REPUBLIC OF LITHUANIA
TRANSPORT ACCIDENT AND INCIDENT INVESTIGATION DIVISION**

2018

ANNUAL REPORT

FOREWORD

The investigators-in-charge of accident and incident investigation appointed by the Minister of Justice of the Republic of Lithuania carry out safety investigations of aircraft, maritime and railway transport accidents and incidents in order to prevent future accidents and not to apportion blame or liability. The investigators-in-charge shall be independent and neither seek nor take instructions in the conduct of safety investigations.

In order to inform the public of the general safety level, the investigators-in-charge publish an annual safety review – annual report. The sources of information in this analysis shall be confidential and not subject to disclosure.

This is a courtesy translation of the safety investigation report. As accurate as the translation may be, the original text in Lithuania is the authentic version and the work of reference.

SAFETY INVESTIGATION

1.1. Safety investigation

Safety investigation is a process conducted by a safety investigation authority for the purpose of accident and incident prevention which includes gathering and analysis of information, drawing of conclusions, including the determination of cause(s) and/or contributing factors and, when appropriate, the making of safety recommendations.

A safety investigation shall be independent of, separate from and without prejudice to any judicial or administrative proceedings to apportion blame or liability.

1.2. Stages of safety investigation

1.2.1. Notification of an accident or an incident

The first stage of a safety investigation is the receipt of a notification about an accident or an incident. Any person involved shall immediately report an accident or incident to the safety investigation authority that shall be accessible 24 hours per day and 7 days per week. Having received a notification about an accident or incident, the safety investigation authority shall classify it having regard to the injuries of people and the damage incurred to the vehicle, and then shall pass a decision regarding the launching of a safety investigation.

The safety investigation authority shall notify without delay the relevant international organisations, the European Commission, authorities of the European Union, Member States and third countries concerned in accordance with the international standards and recommended practices of the accidents or incidents of which it has been notified. Upon receipt of a notification about accident or incident, the Member States or third countries shall have a right to appoint representatives.

1.2.2. Investigation on the occurrence site

An accident or an incident investigation shall continue at the site of the occurrence until all the required evidence from the site of the occurrence is collected, all the relevant persons are inquired, and the required information or entries from the relevant authorities are obtained. However, not all investigations of accidents and incidents have this stage, as a safety investigation of less serious incidents may be carried out by means of correspondence.

In an event of an accident or an incident the priority in all cases shall be given to the search and rescue services whose duty is to help the victims, however, the safety investigation authority has a right to participate in the search and rescue operations in order to preserve, by photographic or other means, any evidence which might be removed, effaced, lost or destroyed. Safe custody shall also include the protection of evidence against further damage, access by unauthorised persons, pilfering and deterioration. Pending the arrival of safety investigators, no person shall modify the state of the site of the accident, take any samples therefrom, undertake any movement of or sampling from the vehicle, its contents or its wreckage, move or remove it, except where such action may be required for safety reasons or to bring assistance to injured persons, or under the express permission of the authorities in control of the site and, when possible, in consultation with the safety investigation authority.

Some evidence is short-lived (ice, liquid leakage, data entries, etc.), therefore they have to be recorded without any delay. However, the collection of evidence may in some cases take longer due to the threats at the site (flammable, explosive, toxic and radioactive materials, hazardous freight, biological risk, sharp, heavy and hazardous objects, etc.).

The safety investigation authority shall seek to carry out a safety investigation at the site of an accident or incident, in order to restore the infrastructure, and not to interfere with the provision of services by the service providers. The safety investigation authority shall collect and move the vehicle and/or its wreckage from the occurrence site if that is necessary for the performance of the further expertise.

1.2.3. Obtaining the factual information

Once the investigation starts at the accident site, the authority starts collecting all the evidence and factual information at the same time. Collection of evidence includes inquiries of the witnesses of an accident or incident, autopsy examination of the bodies of fatally injured persons, medical examination and tests of heavily injured persons, obtaining information from the owner of the vehicle, its operator, designer, manufacturer, technical maintenance organisation, training organisation, traffic control authority, etc.

Subject to the course of the safety investigation, the collection of evidence and factual information may continue even after the investigation at the occurrence site is completed, require more time and include a more thorough examination of the wreckage, additional inquiry of the witnesses, consultation with the experts, etc.

1.2.4. Analysis

An analysis starts after the safety investigation authority has performed all actions at an accident or incident site, and has collected all the evidence and the factual information.

An analysis includes an expert examination of the vehicle, its wreckage and other evidence, testing of components and systems, laboratory examination, decrypting of self-recording devices and their records, analysis of any relevant documents, results of the autopsies of the bodies of fatally injured persons, and of medical examination and tests of heavily injured persons, additional inquiries of witnesses, etc. The scope of the analysis shall be established only in the course of the safety investigation, when more information is obtained.

In other words, the course of the events is restored in the course of the analysis on the basis of the collected evidence. The safety investigation seeks to find out how and why an accident or incident had occurred.

A draft report is formed in the course of the analysis. In case an information gap cannot be filled in by facts, and instead the gap is filled by logical extrapolation and reasonable assumptions, those shall be explicitly indicated in the report. In the course of the process it may be useful to establish all probabilities, and reduce them, by way of analysis, to the most probable hypotheses. Safety deficiencies are identified having regard to the results, if necessary, followed by recommendations for removing safety deficiencies. Just like in the cases of every safety investigation, the public shall be informed about the course of a safety investigation.

1.2.5. Consultation

Before publication of the final report, the safety investigation authority shall solicit comments from the authorities concerned, who shall be bound by applicable rules of professional secrecy with regard to the contents of the consultation. In soliciting such comments, the safety investigation authority shall follow the international standards and recommended practices.

1.2.6. Submission of the report

Each safety investigation shall be concluded with a report in a form appropriate to the type and seriousness of the accident or incident. The report shall protect the anonymity of any individual involved in the accident or incident, and shall state that the sole objective of the

safety investigation is the prevention of future accidents and incidents without apportioning blame or liability. The safety investigation report shall be based only on the facts established in the course of the safety investigation. The report shall contain, where appropriate, safety recommendations.

The safety investigation authority shall make public the final report in the shortest possible time and if possible within 12 months of the date of the accident or incident. If the final report cannot be made public within 12 months, the safety investigation authority shall release an interim statement at least at each anniversary of the accident or incident, detailing the progress of the investigation and any safety issues raised.

1.2.7. Safety recommendations

Safety recommendation means a proposal of a safety investigation authority, based on information derived from a safety investigation or other sources such as safety studies, made with the intention of preventing accidents and incidents. A safety investigation authority may also issue safety recommendations on the basis of studies or analysis of a series of investigations or having collected and analysed any other information related to transport safety.

At any stage of the safety investigation, the safety investigation authority shall recommend in a transmittal letter, after appropriate consultation with relevant parties, to the authorities concerned, including those in other Member States or third countries, any preventive action that it considers necessary to be taken promptly to enhance transportation safety.

Safety recommendations shall in no case create a presumption of blame or liability for an accident or incident.

1.3. Safety vs. judicial or administrative investigation

In a case of an accident or incident, other investigations may be initiated in addition to the safety investigation. Most often, where in the course of an accident or incident any fatal injuries have been incurred, judicial proceeding is initiated with a view to establishing liability or indemnifying the damage incurred as a result.

The safety investigation shall be independent of, separate from and without prejudice to any judicial or administrative proceedings to apportion blame or liability. Any judicial or administrative proceedings shall be completely separated from the safety investigation. The accident or investigation report, and in particular its analysis, conclusions and safety recommendations cannot be used as evidence in a judicial or administrative process seeking to apportion blame or liability, because that was not established in the course of the

safety investigation, and it is not compatible with the objective of the safety investigation. It should also be noted that a safety investigation authority shall not be authorised to provide an expert opinion in any judicial or administrative process related to transport safety. In this view, the authorities carrying out investigations independent from the safety investigation shall themselves take required decisions, and shall conduct and complete investigations irrespective of the course of safety investigations.

However, there is only one evidence, therefore the safety investigation and the pre-trial investigation shall refer to the same evidence. In that case investigation coordination becomes of extreme importance. All authorities that are likely to be involved in the activities related to a safety investigation, shall cooperate with each other through advance arrangements. Those arrangements shall respect the independence of the safety investigation authority, and the safety information collected by the safety investigation authority shall not be published or used for any purposes other than the safety investigation. When a judicial investigation is also instituted, the safety investigation authority shall be notified thereof. Where the judicial authority is entitled to seize any evidence, the safety investigation authority shall have immediate and unlimited access to such evidence.

Where, in the course of a safety investigation, it becomes known or it is suspected that an act of unlawful interference as provided for under national law was involved in the accident or incident, the safety investigation authority shall immediately inform the competent authorities thereabout.

1.4. Sensitive safety information

Any information collected by the safety investigation authority in the course of a safety investigation (all statements taken from persons; the identity of persons who have given evidence; information of particularly sensitive and personal nature; information concerning the health of individuals; notes, drafts, opinions written by the investigators; opinions expressed; drafts of preliminary and final reports or interim statements; information from self-recording devices, voice and image recordings and their transcripts) shall not be made available or used for purposes other than safety investigation.

2

SAFETY INVESTIGATION AUTHORITY

2.1. Safety Investigation Authority

Each Member State of the European Union shall ensure that safety investigations are conducted or supervised, without external interference, by a permanent national safety investigation authority capable of independently conducting a full safety investigation, either on its own or through agreements with safety investigation authorities of other Member States. The safety investigation authority shall neither seek nor take instructions from anybody and shall have unrestricted authority over the conduct of the safety investigations.

The activities entrusted to the safety investigation authority may be extended to and the authority may be tasked with the gathering and analysis of safety related information, in particular for accident prevention purposes, in so far as these activities do not affect its independence and entail no responsibility in regulatory, administrative or standards matters.

The safety investigation authority shall be functionally independent in particular of the authorities responsible for worthiness, certification, maintenance, licensing, traffic control and, in general, of any other party or entity the interests or missions of which could conflict with the task entrusted to the safety investigation authority or influence its objectivity.

2.2. Safety investigation authority resources

The safety investigation authority shall have a plan to ensure that having received a notification about an occurrence, or while preparing for a safety investigation, no time is wasted for irrelevant and/or unnecessary information, for the lack of preparedness or knowledge. Such preparatory plan shall ensure that, upon receipt of a

notification about an accident or incident, the quickest possible access is available to the resources and procedures, including a sufficient number of required qualification investigators, and the required coordination both at the national and international levels, so that all primary actions are performed immediately.

Each Member State shall provide to the safety investigation authority all the required means and facilities be able to obtain sufficient resources to carry out its responsibilities independently. Therefore, the safety investigation authority shall be allocated the budget to enable it to carry out its functions. The safety investigation authority shall have at its disposal, either on its own or by means of the cooperation, or through arrangements with other national authorities or services, qualified personnel and adequate facilities, including offices and hangars to enable the storage and examination of vehicles, their contents and its wreckage. All the investigators shall have the professional knowledge and practical experience in the areas related to their regular investigation duties in order fulfil their tasks. Given that the safety investigation authority is a permanently operating authority, in the case of a multimodal authority, no less than two investigators shall be appointed for each type of transportation. This would ensure that in case a major accident occurs at least one investigator is on duty and able to lead the investigation.

2.3. Cooperation between safety investigation authorities

Upon receipt of a notification of the occurrence of an accident or incident from another Member State or third country, the Member States which are the State of Registry, the State of the Operator, the State of Design and the State of Manufacture shall, as soon as possible, inform the Member State or third country in the territory of which the accident or incident occurred whether they intend to appoint an accredited representative in accordance with the international standards and recommended practices. Such an accredited representative appointed by the Member State shall be an employee of the safety investigation authority.

A safety investigation authority may request the assistance of safety investigation authorities from other Member States. When a safety investigation authority agrees to provide assistance, such assistance shall, as far as possible, be provided free of charge. A safety investigation authority may delegate the task of conducting an investigation into an accident or incident to another safety investigation authority subject to mutual agreement. In that case, the safety investigation authority shall facilitate the investigation process by that other authority.

2.4. Assistance to the victims of accidents and their relatives

The safety investigation authority shall only perform investigations of accidents and incidents, therefore shall not provide any assistance to victims of the accidents and their relatives. When an accident occurs, the Member State in charge of the investigation, the Member State in which the vehicle is registered, the Member state which vehicle was involved in the accident, or the Member State which had a large number of its nationals on board the vehicle involved in the accident, shall appoint a reference person as a point of contact and information for the victims and their relatives.

Victims of the accidents and their relatives very often provide useful information to the safety investigation authority, they are, however, not participants of the safety investigation. The safety investigation authority shall be allowed to inform the victims and their relatives or make public any monitoring information, the information about the progress of the safety investigation, possibly preliminary reports or conclusions, and/or safety recommendations, provided it does not compromise the objectives of the safety investigation and fully complies with applicable legislation on the protection of personal data. Before making such information public, the safety investigation authority shall communicate that information to the victims and their relatives in a way which does not compromise the objectives of the safety investigation.

2.5. Safety investigation authority of the Republic of Lithuania

2.5.1. Investigators-In-Charge

Safety investigations of aircraft accidents and incidents, maritime accidents and incidents and serious accidents, accidents and incidents of railway transport in the Republic of Lithuania are carried out by investigators-in-charge appointed by the Minister of Justice of the Republic of Lithuania. Investigators-in-charge work at the Transport Accident and Incident Investigation Division of the Ministry of Justice, which reports directly to the Minister of Justice.

The Transport Accident and Incident Investigation Division was established in the Ministry of Transport and Communications of the Republic of Lithuania on 1 December 2010, having merged into one division the two independent positions of the investigator-in-charge of aircraft accidents and incidents and the investigator-in-charge of serious accidents, accidents and incidents of railway transport. The Transport Accident and Incident Investigation Division started its actual activity on 1 February 2011 when the positions of the Head of the Division (investigator-in-charge of aircraft accidents and incidents) and of the Chief Specialist (investigator-in-charge of railway transport serious accidents) were established. On 16 September 2011, the

position of the Senior Specialist (investigator-in-charge of maritime accidents and incidents) was established.

As of 1 January 2016, the Transport Accident and Incident Investigation Division was transferred from the Ministry of Transport and Communications of the Republic of Lithuania to the Ministry of Justice of the Republic of Lithuania. There were three positions in the Division at that time – head of the Division (investigator-in-charge of aircraft accidents and incidents), chief specialist (investigator-in-charge of railway transport serious accidents) and senior specialist (investigator-in-charge of maritime accidents and incidents).

On 12 September 2017, the Ministry of Justice cancelled positions existing in other units of the Ministry and added three additional positions to the Transport Accident and Incident Investigation Division. On 6 March 2019, one position was cancelled in the Transport Accident and Incident Division. Structure of the Transport Accident and Incident Division is shown in Fig. 1.

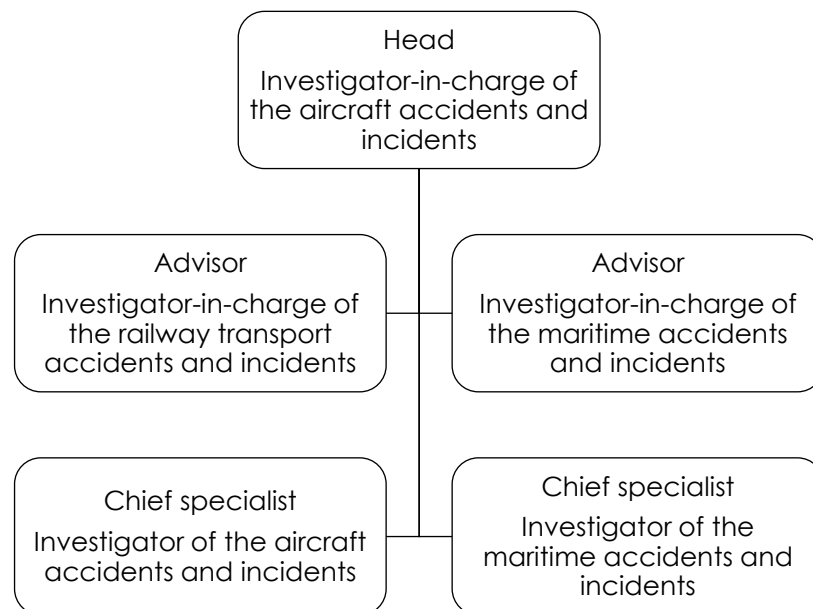

Fig. 1. Structure of the Transport Accident and Incident Division

2.5.2. Activity and cooperation

Having received a notification about an accident or incident, Member States or third parties have the right to appoint their accredited representatives, therefore, many undertaken safety investigations, in particular the safety investigations of accidents and incidents of aircraft and maritime vessels, are of international nature.

The Transport Accident and Incident Investigation Division cooperates with international organisations and authorities. In 2018, the Division continued participating in the activities of the European Marine Safety Agency (EMSA), the European Union Agency for Railways (ERA) and

the European Network of Civil Aviation Safety Investigation Authorities (ENCASIA) – the Division took part in their annual meetings.

On 25-26 April 2018, participation in the third meeting of the Maritime Accident and Incident Authorities of the Baltic Countries in Stockholm, Kingdom of Sweden.

Between 5 and 7 June 2018, the Ministry of Justice held a cross-border desktop exercise on the Mutual Support System of the European Network of Civil Aviation Safety Investigation Authorities (ENCASIA). The topic of the exercise – a safety investigation of a passenger aircraft accident near the international airport. Ten representatives from the safety investigation authorities from the UK, French Republic, Federal Republic of Germany, Hungary, Portuguese Republic and Republic of Latvia took part in the exercise. Representatives from the Office of the Government, Ministry of Transport and Communications, Lithuanian Armed Forces, Prosecutor General's Office, Police Department, Fire and Rescue Department of the Republic of Lithuania, SE Oro navigacija and SE Lithuanian Airports also joined in the exercise.

Between 17 and 18 July 2018, the Ministry of Justice hosted a seminar for the representatives of the European Marine Safety Agency (EMSA) on the issues of investigation of maritime accidents and incidents. The seminar discussed the existing situation in the area of maritime accident and incident investigation, discussed how to improve the arrangement of these investigations in Lithuania. Representatives from the Ministry of Transport and Communications and the Lithuanian Transport Safety Administration also participated in the seminar.

In order to increase the awareness of the seafarers' community of investigations of maritime accidents, brief members of this community about statutory requirements concerning notifications about maritime accidents or incidents and to promote cooperation between seafarers and the investigator-in-charge in the notification and investigation of maritime accidents and incidents, the newly appointed investigator-in-charge visited 13 entities (shipping companies, state authorities, associations, etc.) in 2018.

2.5.3. Training and professional development

All the safety investigators shall have the professional knowledge and practical experience in the areas related to their regular investigation duties in order fulfil their tasks. For this reason, introductory, basic and professional development training on safety investigation are required. The supply of such training on the market, however, is overly limited, the training events offered are costly, therefore, training is undertaken only having regard to financial means.

In 2018, the Division took part in the fully funded basic training for maritime accident investigators held by the European Marine Safety Agency – the training of the European Marine Casualty Information

Platform (EMCIP), the seminar on fires on ro-ro passenger ship decks, and the seminar about the collection of evidence in relation to the human factor. Participation in the fully funded training on the mutual support system in case of major accidents of passenger aircraft held by the European Network of Civil Aviation Safety Investigation Authorities (ENCASIA) and in the seminar of the European chapter of the International Society of Air Safety Investigators (ESASI).

3

AIRCRAFT ACCIDENTS AND INCIDENTS

3.1. Legal acts

Aircraft accident and incident investigations are carried out in accordance with Annex 13 of the Convention of the International Civil Aviation Organisation, Regulation (EU) No 996/2010 of the European Parliament and of the Council of 20 October 2010 on the investigation and prevention of accidents and incidents in civil aviation and repealing Directive 94/56/EC (hereinafter – Regulation No 996/2010), as well as Order No. 1R-388 of 31 December 2015 of the Minister of Justice of the Republic of Lithuania 'On the approval of the Description for the Procedure of Investigation of Civil Aircraft Accidents and Incidents'.

3.2. Definitions

Accident means an occurrence associated with the operation of an aircraft which, in the case of a manned aircraft, takes place between the time any person boards the aircraft with the intention of flight until such time as all such persons have disembarked, or in the case of an unmanned aircraft, takes place between the time the aircraft is ready to move with the purpose of flight until such time it comes to rest at the end of the flight and the primary propulsion system is shut down, in which:

- a) a person is fatally or seriously injured as a result of being in the aircraft; or, direct contact with any part of the aircraft, including parts which have become detached from the aircraft; or, direct exposure to jet blast; except when the injuries are from natural causes, self-inflicted or inflicted by other persons, or when the injuries are to stowaways hiding outside the areas normally available to the passengers and crew; or
- b) the aircraft sustains damage or structural failure which adversely affects the structural strength, performance or flight characteristics of

the aircraft, and would normally require major repair or replacement of the affected component, except for engine failure or damage, when the damage is limited to a single engine, (including its cowlings or accessories), to propellers, wing tips, antennas, probes, vanes, tires, brakes, wheels, fairings, panels, landing gear doors, windscreens, the aircraft skin (such as small dents or puncture holes) or minor damages to main rotor blades, tail rotor blades, landing gear, and those resulting from hail or bird strike, (including holes in the radome); or

c) the aircraft is missing or is completely inaccessible.

Serious incident means an incident involving circumstances indicating that there was a high probability of an accident and is associated with the operation of an aircraft. In the case of a manned aircraft, takes place between the time any person boards the aircraft with the intention of flight until such time as all such persons have disembarked, or in the case of an unmanned aircraft, takes place between the time the aircraft is ready to move with the purpose of flight until such time it comes to rest at the end of the flight and the primary propulsion system is shut down.

Incident means an occurrence, other than an accident, associated with the operation of an aircraft which affects or could affect the safety of operation.

3.3. Obligation to investigate

The investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania carries out the safety investigations of all accidents and serious incidents in the Republic of Lithuania involving the aircraft covered by Regulation (EU) 2018/1139¹ of the European Parliament and of the Council.

When an aircraft to which Regulation (EU) 2018/1139 applies and which is registered in the Republic of Lithuania is involved in an accident or serious incident the location of which cannot be definitely established as being in the territory of any State, a safety investigation shall be conducted by the investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania.

The investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania may decide to investigate incidents, as well as accidents or serious incidents of other types of aircraft, when he expects to draw safety lessons from them.

¹ Regulation (EU) 2018/1139 of the European Parliament and of the Council of 4 July 2018 on common rules in the field of civil aviation and establishing a European Union Aviation Safety Agency, and amending Regulations (EC) No 2111/2005, (EC) No 1008/2008, (EU) No 996/2010, (EU) No 376/2014 and Directives 2014/30/EU and 2014/53/EU of the European Parliament and of the Council, and repealing Regulations (EC) No 552/2004 and (EC) No 216/2008 of the European Parliament and of the Council and Council Regulation (EEC) No 3922/91.

The investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania may decide not to initiate a safety investigation when an accident or serious incident concerns an unmanned aircraft for which a certificate or declaration is not required pursuant to Article 56 (1) and (5) of Regulation (EU) 2018/1139, or concerns a manned aircraft with a maximum take-off mass less than or equal to 2 250 kg, and where no person has been fatally or seriously injured.

3.4. Notification system

Any person involved who has knowledge of the occurrence of an accident or serious incident in the Republic of Lithuania incident shall immediately notify this to the investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania.

The investigator-in-charge shall notify without delay the European Commission, the European Union Aviation Safety Agency (EASA), the International Civil Aviation Organisation (ICAO), the Member States and third countries concerned in accordance with the international standards and recommended practices of the occurrence of all accidents and serious incidents of which he/she has been notified.

3.5. Accidents and serious incidents

In 2018, 6 notifications were received about the aircraft accidents in Lithuania; all the aircraft involved were general aviation aircraft. Following the provisions of Article 5 of Regulation No 996/2010, three aircraft accident safety investigations have been initiated. Fig. 2 details the accidents and serious incidents in Lithuania between 2010 and 2018.

Fig. 2. Aircraft accidents and serious incidents in Lithuania

Fig. 3 details the persons injured in the aircraft accidents in Lithuania.

Fig. 3. Aircraft accidents with persons injured in Lithuania

Fig. 4 shows the locations of aircraft accidents that took place in Lithuania between 2016 and 2018. The accidents that took place in 2016 are marked in violet Figures, in 2017 – in red, in 2018 – in green.

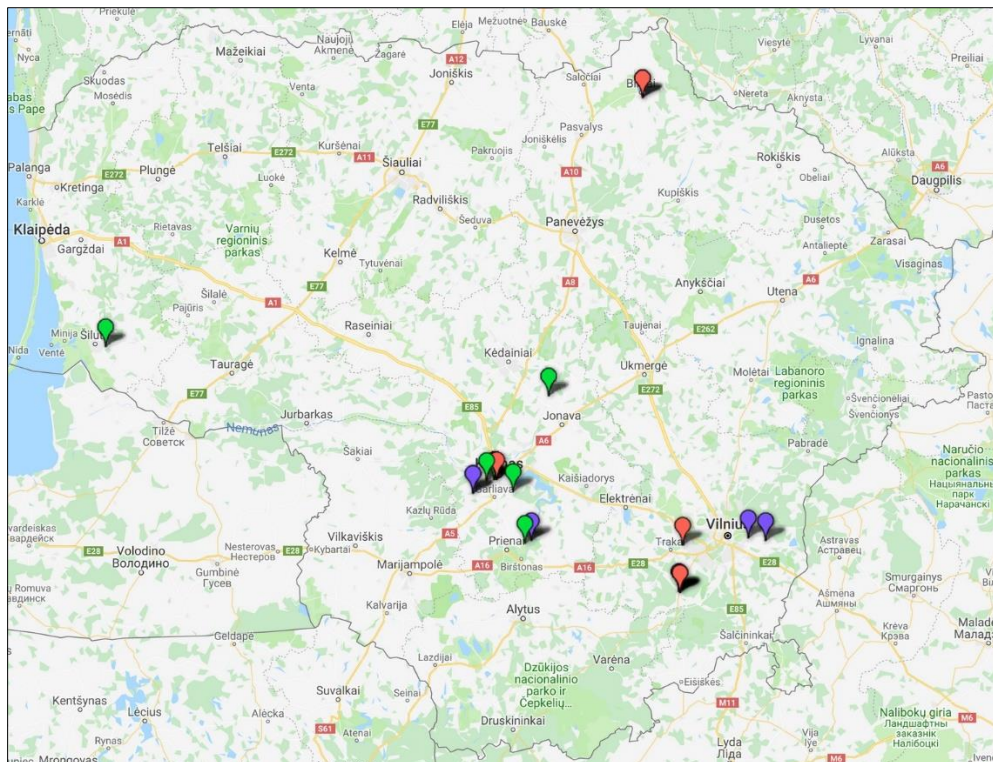

Fig. 4. Locations of aircraft accidents (Google Maps) in 2016 (violet Figures), 2017 (red Figures) and 2018 (green Figures)

In 2018, three notifications were received about accidents and two notifications were received about serious incidents which occurred outside Lithuania and involved the aircraft registered in the Republic of Lithuania. All the accidents involved general aviation aircraft and

serious incidents – commercial aviation aircraft. The safety investigations of these accidents and serious incidents are carried out by the safety investigation authorities of the state of the incident occurrence. The investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania is involved in the safety investigations of these incidents as an accredited representative.

The notifications received in 2016-2018 on the accidents and serious incidents of the aircraft registered in the civil aircraft register of the Republic of Lithuania are shown in Fig. 5.

Fig. 5. Accidents and serious incidents outside Lithuania that involved the aircraft registered in the civil aircraft register in the Republic of Lithuania

The notifications received in 2016-2018 on accidents outside Lithuania that involved the aircraft designed and manufactured in Lithuania but were not registered in the civil aircraft register of the Republic of Lithuania are presented in Fig. 6. The investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania is involved in the safety investigations of these incidents as an accredited representative.

Fig. 6. Accidents outside Lithuania that involved the aircraft designed and manufactured in Lithuania

The locations of the accidents that took place between 2016 and 2018 in Lithuania and other states (except for the United States of America) and involved the aircraft registered, designed and manufactured in the Republic of Lithuania are shown in Fig. 7. The violet colour Figures marks the accidents that took place in 2016, red – in 2017, and green – in 2018.

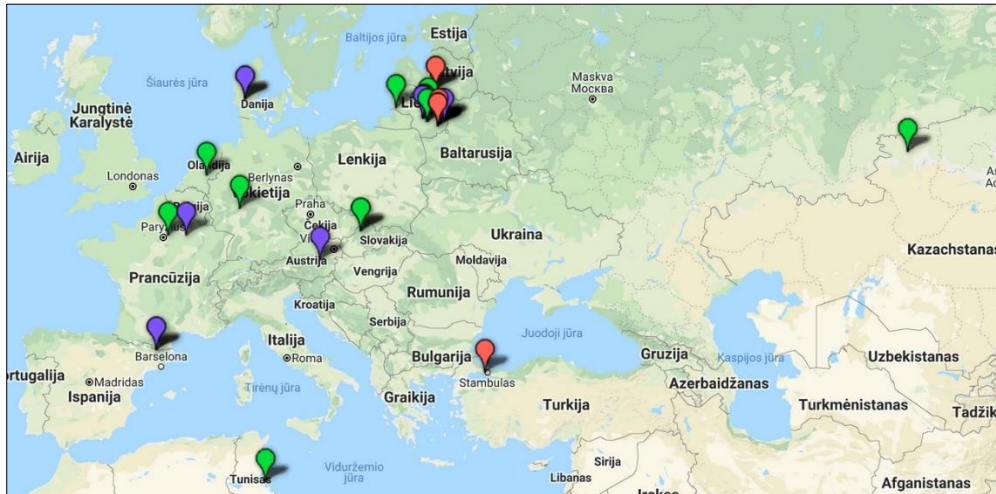

Fig. 7. Locations of aircraft accidents (Google Maps) in 2016 (violet Figures), in 2017 (red Figures), in 2018 (green Figures)

3.6. Open safety investigations

Fig. 8 and Table 1 provide the data on the open safety investigations. Fig. 8 also shows the data of the safety investigations carried out in 2018.

Fig. 8. Open safety investigations of aircraft accidents and incidents and safety investigations carried out in 2018

3.7. Safety investigation reports

Three safety investigation reports were published in 2018:

22 June 2018 – publication of the safety investigation report on the accident to an ultralight aircraft VL-3 Evolution, national and registration markings LY-VLA, that occurred on 19 April 2014 in Quarter No. 396 of Madžiūnai forest, Madžiūnai village, Paluknys neighbourhood, Trakai region, Vilnius district, the Republic of Lithuania.

22 June 2018 – publication of the safety investigation report on the accident to an aircraft Tecnam P2002-JF, national and registration markings LY-BAQ, that occurred on 14 August 2017 in S. Darius and S. Girėnas aerodrome, Kaunas, the Republic of Lithuania.

12 December 2018 – publication of the safety investigation report on accident to an aircraft PZL-104 Wilga-35A, national and registration markings LY-AGB, that occurred on 27 June 2017 in Paluknys aerodrome, Vilnius district, the Republic of Lithuania.

3.8. Safety recommendations

The investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania registers all the submitted safety recommendations and related replies in the central repository, created according to Commission Regulation (EC) No 1321/2007 of 12 November 2007 laying down implementing rules for the integration into a central repository of information on civil aviation occurrences exchanged in accordance with Directive 2003/42/EC of the European Parliament and of the Council. Safety investigation authorities also register all the safety recommendations received from third countries in the central repository.

The name of the central repository is the Safety Recommendations Information System (SRIS). The investigator-in-charge of aircraft accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania has not submitted any safety recommendation. The investigator-in-charge obtained connected to the Safety Recommendations Information System in 2016 and expects to submit such recommendations in the near future.

4

JŪRŲ LAIVŲ AVARIJOS IR INCIDENTAI

4.1. Legal acts

Maritime accident and incident investigations are carried out in accordance with Commission Regulation (EU) No 1286/2011 of 9 December 2011 adopting a common methodology for investigating marine casualties and incidents developed pursuant to Article 5(4) of Directive 2009/18/EC of the European Parliament and of the Council, Directive 2009/18/EC of the European Parliament and the Council of 23 April 2009 establishing the fundamental principles governing the investigation of accidents in the maritime transport sector and amending Council Directive 1999/35/EC and Directive 2002/59/EC of the European Parliament and of the Council, the Law on Maritime Safety of the Republic of Lithuania, and Order No 1R-386 of 30 December 2015 of the Minister of Justice of the Republic of Lithuania 'On the approval of the description of the procedure, drawing up and submission of reports and safety recommendations for safety investigations of maritime accidents and incidents'.

Maritime accidents and incidents are classified and notifications on maritime accidents and incidents are made in accordance with Order No 3-461 of the Minister of Transport and Communications of the Republic of Lithuania 'On the approval of the description of the procedure for classification of and notification on maritime accidents and incidents'.

4.2. Definitions

A marine casualty means an event, or a sequence of events, that has resulted in any of the following which has occurred directly in connection with the operations of a ship:

- 1) the death of, or serious injury to, a person;

- 2) the loss of a person from a ship;
- 3) the loss, presumed loss or abandonment of a ship;
- 4) material damage to a ship;
- 5) the stranding or disabling of a ship, or the involvement of a ship in a collision;
- 6) material damage to marine infrastructure external to a ship, that could seriously endanger the safety of the ship, another ship or an individual; or
- 7) severe damage to the environment, or the potential for severe damage to the environment, brought about by the damage of a ship or ships.

However, a marine casualty does not include a deliberate act or omission, with the intention to cause harm to the safety of a ship, an individual or the environment. Marine casualties are classified as very serious casualties, serious casualties and less serious casualties.

Very serious casualties are casualties to ships which involve total loss of the ship, loss of life, or severe pollution.

Serious casualties are casualties to ships which do not qualify as very serious casualties and which involve a fire, explosion, collision, grounding, contact, heavy weather damage, ice damage, hull cracking, or suspected hull defect, etc., resulting in:

- immobilization of main engines, extensive accommodation damage, severe structural damage, such as penetration of the hull under water, etc., rendering the ship unfit to proceed , or pollution (regardless of quantity); and/or
- a breakdown necessitating towage or shore assistance.

Less serious casualties are casualties to ships which do not qualify as very serious casualties or serious casualties.

Marine incident means an event, or sequence of events, other than a marine casualty, which has occurred directly in connection with the operations of a ship that endangered, or, if not corrected, would endanger the safety of the ship, its occupants or any other person or the environment.

4.3. Obligation to investigate

The investigator-in-charge of maritime accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania carries out safety investigations of **very serious casualties** which occurs directly in connection with the operation of a ship and which:

- involve a ship flying Lithuanian flag, irrespective of the location of the casualty;
- occurs within Lithuanian territorial sea, internal waters and Lithuanian port areas, irrespective of the flag of the ship;
- involves a substantial interest of the Republic of Lithuania.

In case of a **serious casualty**, the investigator-in-charge shall carry out a preliminary assessment in order to decide whether or not to undertake a safety investigation.

In case of **less serious casualties** and marine incidents, the investigator-in-charge shall decide whether or not to undertake a safety investigation.

The investigator-in-charge shall not investigate and register the accidents and incidents involving only:

- ships of war and troop ships and other ships owned or operated by the Republic of Lithuania and used only on government non-commercial service;
- inland waterway vessels operating in inland waterways;
- ships not propelled by mechanical means, wooden ships of primitive build, traditional ships, pleasure yachts and pleasure craft not engaged in trade, unless they are or will be crewed and carrying more than 12 passengers for commercial purposes;
- fishing vessels with a length of less than 15 metres;
- fixed offshore drilling units.

4.4. Notification system

All responsible authorities and/or parties concerned shall immediately notify all maritime accidents and incidents to the investigator-in-charge of maritime accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania.

The Lithuanian Transport Safety Administration, the Maritime Rescue Coordination Centre of the Navy Forces of the Lithuanian Armed Forces, the SE Klaipėda State Sea Port Authority, and/or any other persons or entities, having received the information about any maritime accident or incident, shall immediately, but no later than within 24 hours from the moment of the information about the occurrence, notify the investigator-in-charge.

In case of a casualty or an incident involving seagoing ship flying the flag of the Republic of Lithuania beyond the limits of the search and rescue area in the Baltic sea assigned to the Republic of Lithuania, the shipping company or the master of seagoing ship shall without delay, but in any case no later than within 24 hours from such accident or an incident, report this to the Lithuanian Transport Safety Administration, which shall without any delay, but within no later than 24 hours from the receipt of such notification, notify the investigator-in-charge thereof.

In case of a very serious casualty involving seagoing ship flying the flag of the Republic of Lithuania beyond the limits of the search and rescue area in the Baltic sea assigned to the Republic of Lithuania, the shipping company or the master of seagoing ship shall without delay, but in any case no later than within 1 hour from the receipt of initial information

about such casualty, report this to the Lithuanian Transport Safety Administration, which shall without any delay, but within no later than 1 hour from the receipt of such notification, notify the investigator-in-charge thereof.

In case of a maritime casualty or incident in the search and rescue area of the Baltic Sea assigned to the Republic of Lithuania, the Klaipėda State Sea Port, Šventoji State Sea Port, Būtingė oil terminal waters or accesses thereto, the master of seagoing ship shall immediately, and no later than within 1 hour after the receipt of such notification, notify the investigator-in-charge thereof.

The investigator-in-charge shall notify the European Commission about maritime accidents and incidents. He shall also submit to the European Commission the data obtained in the course of safety investigations using the European Marine Casualty Information Platform (EMCIP).

Failure to report a maritime casualty or incident to the competent authority under the established procedure renders the person administratively liable under Article 401(1) of the Code of Administrative Offences.

4.5. Accidents and incidents

In 2018, total 23 notifications about accidents and incidents involving seagoing ships were received. Data about the categories of accidents and incidents of 2018 are shown in Fig. 9, 10 and 11.

23 Notifications about maritime casualties and incidents	27 Ships involved in casualties and incidents	13 Casualties and incidents in the area of Klaipėda State Seaport
6 Casualties and incidents in the area of Klaipėda State Seaport involving only the ships registered abroad	17 Casualties and incidents involving the ships registered in Lithuania	2 Serious casualties involving seagoing ships when the main engine failure and assistance from shore was used
0 Fatally injured persons during casualties and incidents	1 Severely injured persons during casualties and incidents	3 Open safety investigations

Fig. 9. Statistics of casualties and incidents in 2018

There were no notifications about very serious casualties in 2018, however, two serious casualties took place and, as a result, the ships were unable to proceed on their own power and assistance from

coastal services was used. There was an explosion in the engine room during one of those serious casualties and a crew member who was present there suffered injuries as a result. There were 6 less serious casualties and 7 incidents in total in the area of Klaipėda State Seaport in 2018. The ships involved in these casualties and incidents were registered in 8 states.

Fig. 10. Categories of maritime casualties and incidents involving ships registered in Lithuania

Fig. 11. Categories of maritime casualties and incidents in the area of Klaipėda State Seaport

The places of the maritime accidents and incidents in 2018 are shown in Fig. 12.

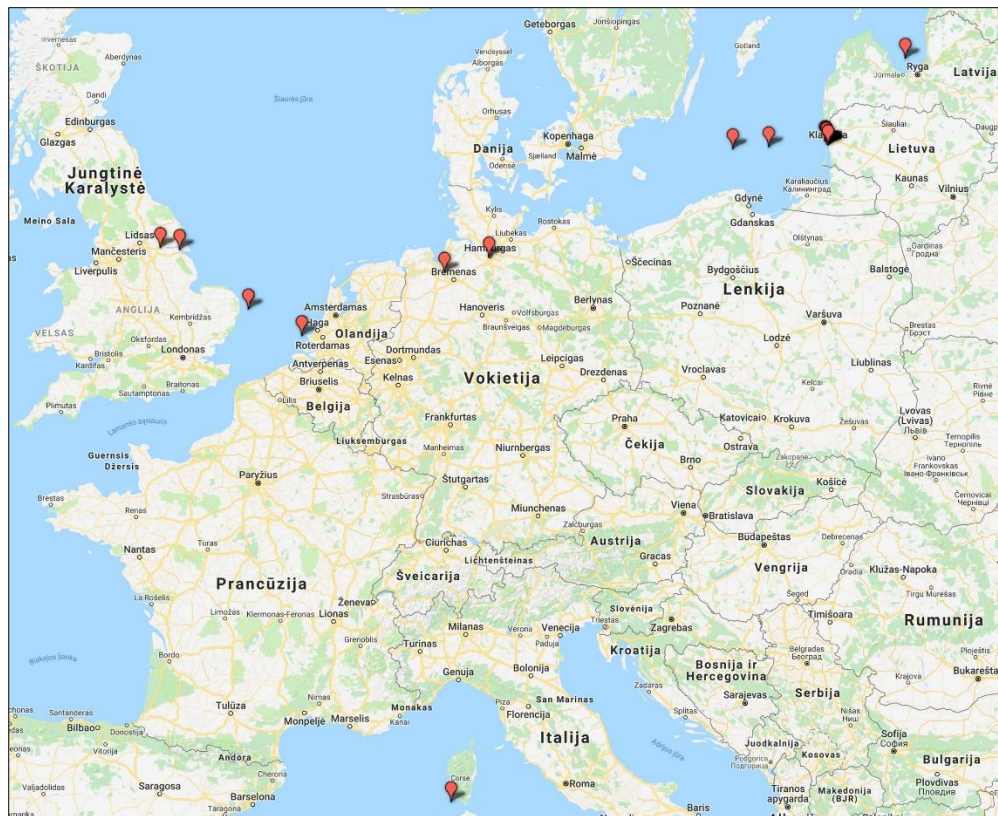

Fig. 12. Places of maritime accidents and incidents (Google Maps)

The places of the maritime accidents and incidents that occurred in the area of Klaipėda State Seaport and in the territorial waters of the Republic of Lithuania in 2018 are shown in Fig. 13.

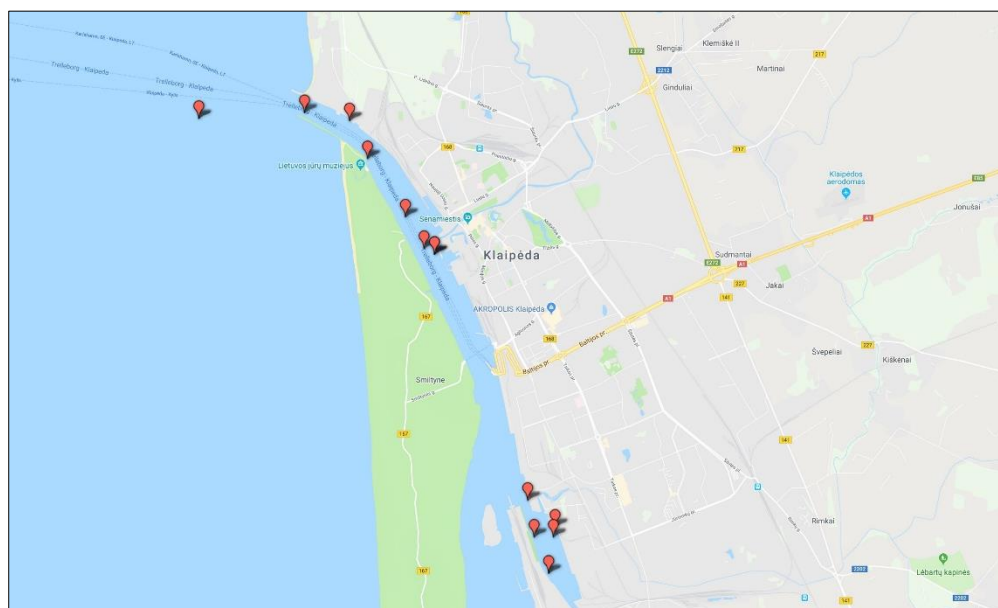

Fig. 13. The places of maritime accidents and incidents in the area of Klaipėda State Seaport and in the territorial waters of the Republic of Lithuania (Google Maps)

Between 2010 and 2018, 124 notifications about casualties and incidents (Fig. 14) were received – approximately 13.8 occurrences annually. Over this period of 9 years, 1.3 very serious casualties, 2.2 serious casualties, 6.4 – less serious casualties and 3.8 incidents per year have been registered on average. A record number of events was registered in 2018 – 23 (Fig. 14). That can be explained by the fact that in 2018 the newly appointed investigator-in-charge met with potential notifiers (13 entities visited in total: shipping companies, state authorities, associations) and informed them about the objectives and importance of notifications about accidents and incidents.

Fig. 14. Notifications about maritime accidents and incidents received in 2010 – 2018

The descriptions of the accidents and incidents that took place between 2016 and 2018 are available on the website of the Ministry of Justice. Summary statistics is presented in Fig. 15.

Fig. 15. Places of accidents and incidents in 2016-2018

4.6. Open safety investigations

The safety investigations of three accidents were started in 2018:

On 16 April 2018 the Lithuanian registered Ro-Ro cargo vessel Finlandia Seaways, IMO 9198721, suffered main engine failure and subsequent engine room fire. The fire was successfully extinguished by means of the CO₂ fire-fighting system by the efforts of the crew of the vessel. Engine room and equipment sustained damages. One crew member, who was in the engine room at the moment of the accident suffered injuries. The investigation of this serious marine accident is led by Marine Accident Investigation Branch, the UK. The safety investigation is carried out together with the investigator-in-charge of maritime accidents and incidents appointed by the Minister of Justice of the Republic of Lithuania.

On 24 September 2018 the Lithuanian registered general cargo vessel Klaipeda, IMO9106584, on her way from Riga, Latvia to Lubmin, Germany, sustained a main engine failure, which resulted in loss of propulsion power. Anchor was dropped and ship was towed to Riga port for repairs.

On 2 September 2018 the Lithuanian registered Ro-Pax vessel Regina Seaways with cargo and passengers on board, on her way from Kiel, Germany to Klaipeda, Lithuania, sustained failure of main engine, followed by automatic shutdown of both main engines and subsequent fire in the engine room. Started main engine and ship resumed voyage using her own power and on the same day moored in port of Klaipeda.

4.7. Safety investigation reports

7 November 2018 – publication of the safety investigation report on very serious accident to Lithuanian flag Ro-Ro cargo ship Botnia Seaways, IMO 9192129, that occurred on 23 November 2017, in Rades, Tunisia.

4.8. Safety recommendations

In 2018, two safety recommendations were published:

SR-2018-L-01

It is recommended to DFDS Seaways JSC to review and supplement internal documents - Occupational Safety and Health Instruction No 8L and Cargo Operation's Procedure No. 7.4.0, by provisions for additional safety measures for container handling on ro-ro decks, and include cases, when cargo handling is performed by a non-ship crew.

The safety recommendation was completed and implemented on 16 January 2018.

SR-2018-L-02

It is recommended to the Lithuanian Transport Safety Administration to prepare and implement a plan, according to which it will periodically check whether the companies operating ro-ro ships flying Lithuanian flag, properly ensures implementation of applicable risk assessment requirements for cargo operations on weather decks in its' ro-ro vessels.

Implementation of the safety recommendation is ongoing.

5

SERIOUS ACCIDENTS, ACCIDENTS AND INCIDENTS IN RAILWAY TRANSPORT

5.1. Legal acts

All serious accidents, accidents and incidents in railway transport are investigated following the provisions of Chapter V of Directive 2004/49/EC of the European Parliament and of the Council of 29 April 2004 on safety on the Community's railways and amending Council Directive 95/18/EC on the licensing of railway undertakings and Directive 2001/14/EC on the allocation of railway infrastructure capacity and the levying of charges for the use of railway infrastructure and safety certification, which was transposed to Order No 1R-385 of 30 December 2015 of the Minister of Justice of the Republic of Lithuania 'On the approval of the description of the procedure for the drawing up and the submission of reports on the investigation of serious accidents, accidents and incidents, and of safety recommendations in railway transport', the Law on Railway Traffic Safety of the Republic of Lithuania, and Directive (EU) 2016/798 of the European Parliament and of the Council of 11 May 2016 on railway safety (recast) the transposition whereof into the national law has been postponed until 16 June 2020.

5.2. Definitions

Serious accident means any train collision or derailment of trains resulting in the death of at least one person or serious injuries to five or more persons or extensive damage of no less than EUR 2 million to rolling stock, the infrastructure or the environment is incurred, and any other accident with the same consequences which has an obvious impact on railway safety regulation or the management of safety.

Accident means an unwanted or unintended sudden event or a specific chain of such events which have harmful consequences; accidents are divided into the following categories: collisions; derailments; level crossing accidents; accidents to persons involving rolling stock in motion; also an accident when at least one person suffers injury because of moving rolling stocks, or when fire strikes in rolling stocks, and any other events causing comparable harmful consequences.

Incident means any occurrence, other than an accident or serious accident, affecting the safety of railway operations that however, did not cause any outcomes of serious accident or accident.

5.3. **Obligation to investigate**

All investigations related to railway transport serious accidents in the Republic of Lithuania are performed by the investigator-in-charge appointed by the Minister of Justice of the Republic of Lithuania to investigate railway serious accidents, accidents or incidents which under slightly different conditions might have led to serious accidents. Having received a notification about a railway transport occurrence, the investigator-in-charge shall within 3 calendar days assess whether this railway transport occurrence meets the characteristics of a serious accident, and in case it does match such characteristics, initiate an investigation of the railway transport serious accident.

In addition to serious accidents, the investigator-in-charge may investigate the accidents and incidents that under slightly different conditions could have caused serious accidents. The investigator-in-charge shall at his own discretion decide whether to initiate an investigation of such accident or the incident. In his decision, the investigator-in-charge shall take into account the seriousness of the accident or the incident, whether it forms part of a series of accidents or incidents relevant to the system as a whole, its impact on railway safety on a Community level, as well as requests from infrastructure managers, railway undertakings, the safety authority or Member States.

5.4. **Notification system**

Upon an occurrence of a railway transport serious accident or incident, the railway undertakings (carriers), the undertakings using the railway infrastructure and the railway infrastructure manager shall without delay, and in case of a railway incident – within no later than 24 hours, notify the investigator-in-charge appointed by the Minister of Justice of the Republic of Lithuania to investigate serious railway accidents, accidents or incidents which under slightly different conditions might have led to serious accidents and shall submit an initial notification of an approved form about the serious accident, accident or incident in railway transport.

An initial notification to the investigator-in-charge may be sent by railway infrastructure managers, railway undertakings (carriers) and undertakings that use the railway infrastructure or by their authorised persons by sending a digital copy of the initial notification by e-mail. In case the Lithuanian Transport Safety Administration receives such initial notification directly, it shall, within 24 hours after the moment of receipt of the initial notification, forward it by e-mail to the investigator-in-charge appointed by the Minister of Justice of the Republic of Lithuania to investigate railway serious accidents, accidents or incidents which under slightly different conditions might have led to serious accidents.

Details on the time of receipt of notifications about railway transport occurrences are shown in Fig. 16. The horizontal axis shows the time of receipt of notifications about occurrences and the vertical – the reference number of the notification. The attention should be drawn to the fact that the working hours of the investigator-in-charge are from 8 a.m. to 5 p.m. That means that 39 per cent of the notifications have been received during the working hours of the investigator-in-charge, while 61 per cent of the notifications – outside the working hours.

Fig. 16. Time of the notifications received in 2018 about railway transport occurrences

5.5. Serious accidents, accidents and incidents

The notifications on serious accidents, accidents and incidents in railway transport received in 2016-2018 are shown in Fig. 17.

Fig. 17. Received notifications about railway transport occurrences

Data about the number of persons injured during railway transport serious accidents and accidents are shown in Fig. 18.

Fig. 18. Persons Injured in railway transport occurrences

Number of railway transport occurrences by categories are presented in Fig. 19. Here GRS – rolling stock collision; GRS-K – rolling stock collision with obstacles within the clearance gauge; GRN – rolling stock derailment; JR – accident to persons from moving rolling stock; ELP – level crossing accidents; GR – fire in rolling stock; KEI – other occurrences.

Fig. 19. Number of railway transport occurrences by categories

Fig. 20 shows the places of railway transport serious accidents (violet colour), accidents (red colour) and incidents (green colour) in Lithuania in 2018.

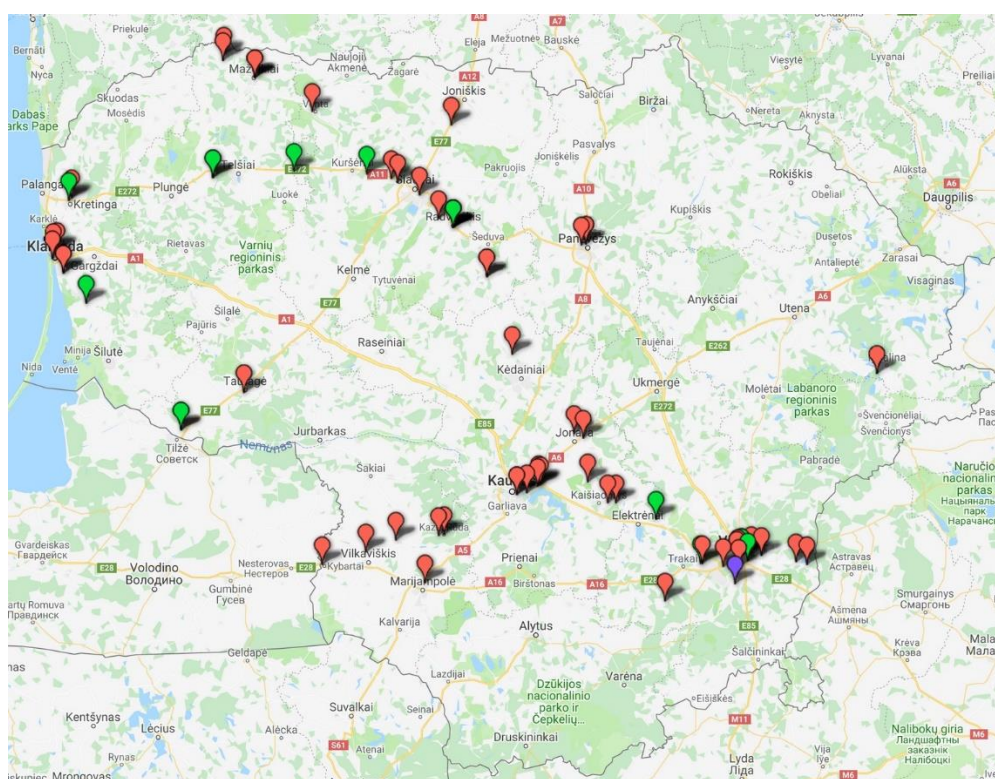

Fig. 20. Places of railway transport serious accidents (violet colour), accidents (red colour) and incidents (green colour) in Lithuania in 2018 (Google Maps)

5.6. Open safety investigations

On 5 March 2018, a railway transport serious accident in Track No LNR near the track switch No 2K of Vaidotai Railway Station. The train No 3270SV was passing from Vaidotai Railway Station towards Kena Railway Station and collided into two track workers on the track No LRN. Both track workers were fatally injured during the collision, no major damage to the train and the infrastructure. The safety investigation stage – analysis.

5.7. Safety investigation reports and safety recommendations

18 June 2018 – publication of report without recommendations on the accident of locomotives TGK-2 No 7477 and TEM TMH No 982400000260 that occurred on 18 October 2016 on the siding No 14 of Petrašiūnai, Palemonas track of Kaunas Railway Station.

All the reports on safety investigations of railway transport accidents and the recommendations made are published in the database of the European Union Agency for Railways and on the website of the Transport Accident and Incident Division of the Ministry of Justice of the Republic of Lithuania www.tm.lrv.lt/taits and is publicly accessible.
