

Rail Industry view of a future CCS Architecture - preliminary considerations

*CCRCC – Session V
Valenciennes – 15 -17th October 2019*

- ❑ Interoperability is the driving force for the current standardization activities (TSI CCS, TSI OPE)
- ❑ A Single European Rail Area has to go beyond interoperability by defining a future CCS architecture
- ❑ A common core of operational rules based on ETCS Level 2 and 3 shall become the starting point
- ❑ The business case shall comprise customers and suppliers from all SERA networks
- ❑ Keep the leading role of both European Railways and European Rail Industry

Telecom Supply Industry vision: Future Communication System

UNITEL

The new rail communication system is the enabling gamechanger

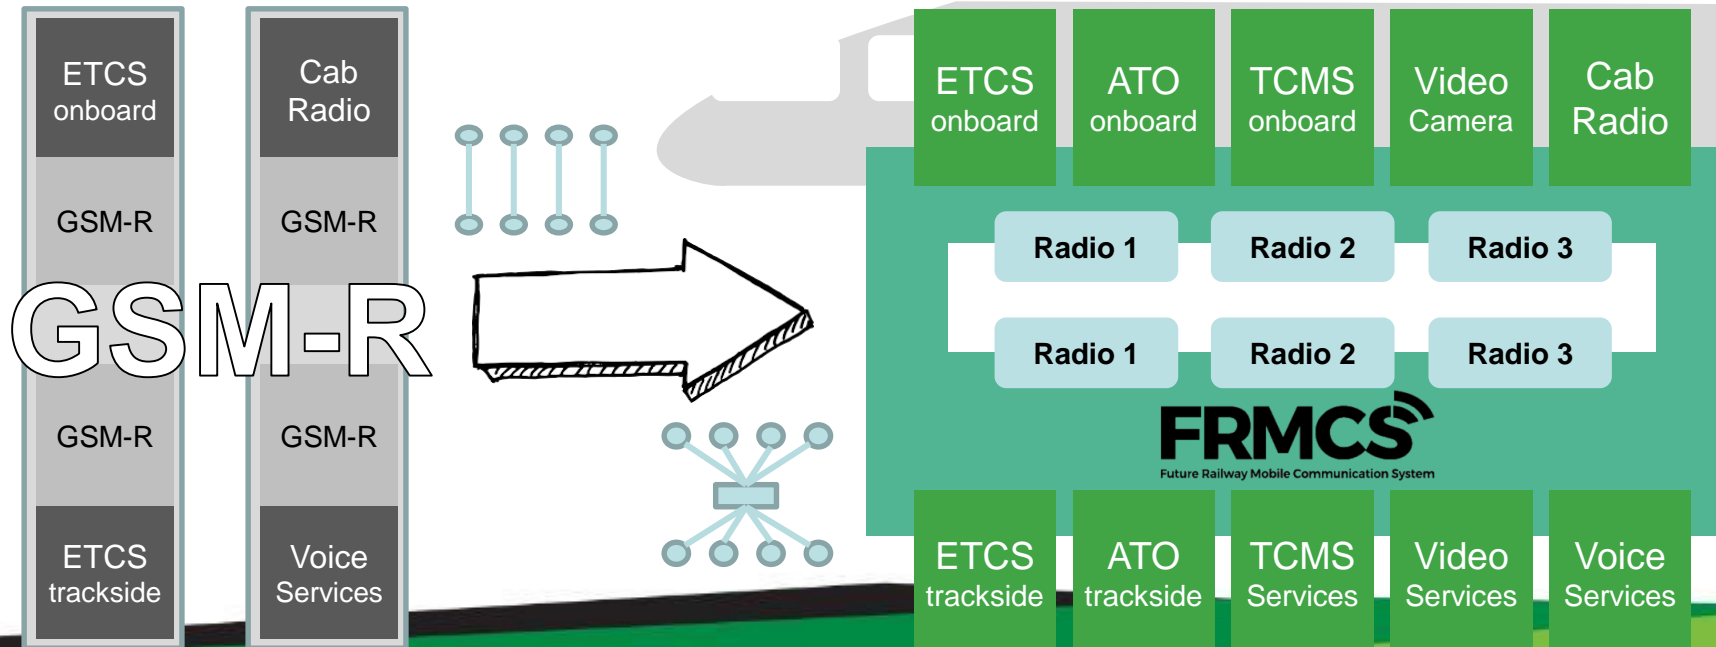

Represents the backbone for the future CCS system

Provides generic, flexible, feature rich communication services

Is the digital glue between applications, modules and sub-systems

■ Workshop 5

■ Modularity

- ... is a key element for innovation
- ... improve life-cycle-management
- Find the balance between flexibility, openness and complexity

■ Harmonization of Operational Rules

- Class B systems are a fact and we have to cope with it
- Light at the end of the tunnel: CH, LX, BE, DK, IT, .. Remove Class B
- New rules shall be aligned between the IMs/Rus on European level

■ Colaborative approach

- Each party is able to bring value add to the table
- We have to enforce our engagement to bring CCS forward
- We already reached a good level: Let's continue and improve
