

B4R1 (reduced envelope up to SV 2.2/2.1) or B3R2

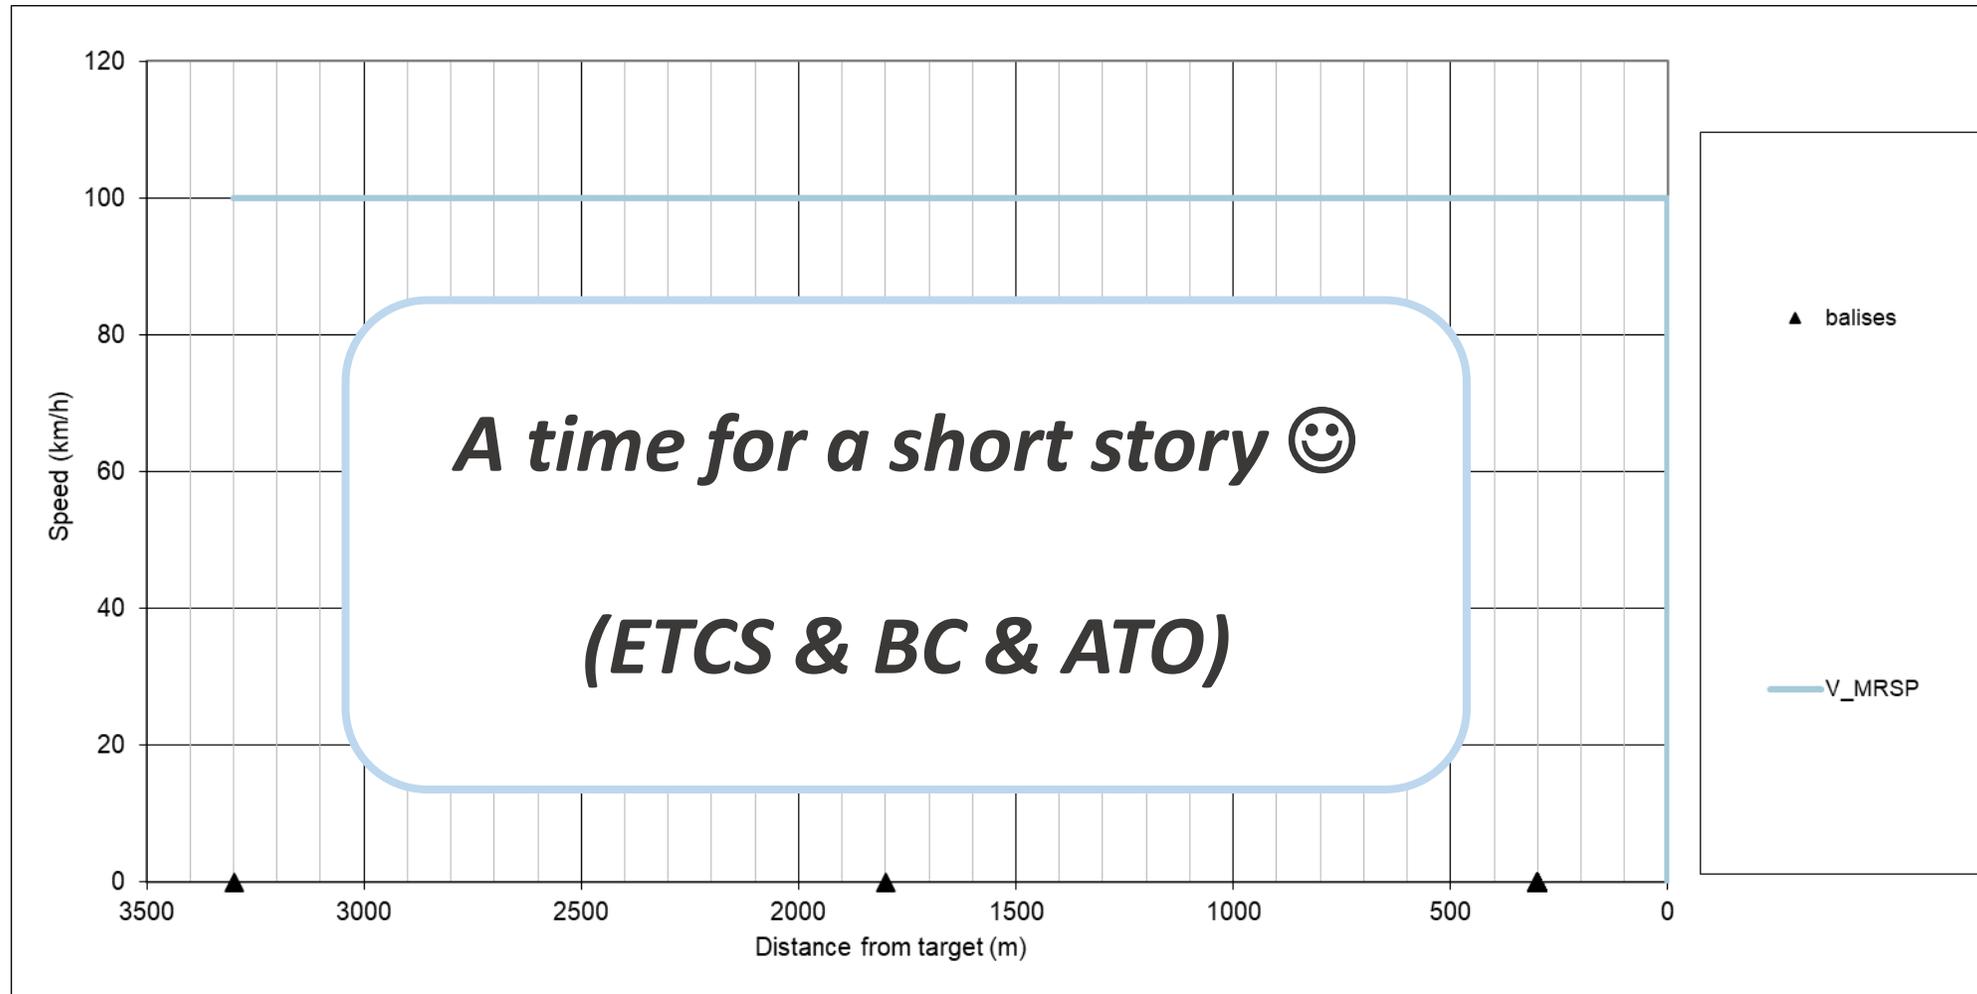

- Will this train be further braked by the B3R2 ERTMS/ETCS OBU?

Will this train be braked by the B3R2 ETCS OBU?

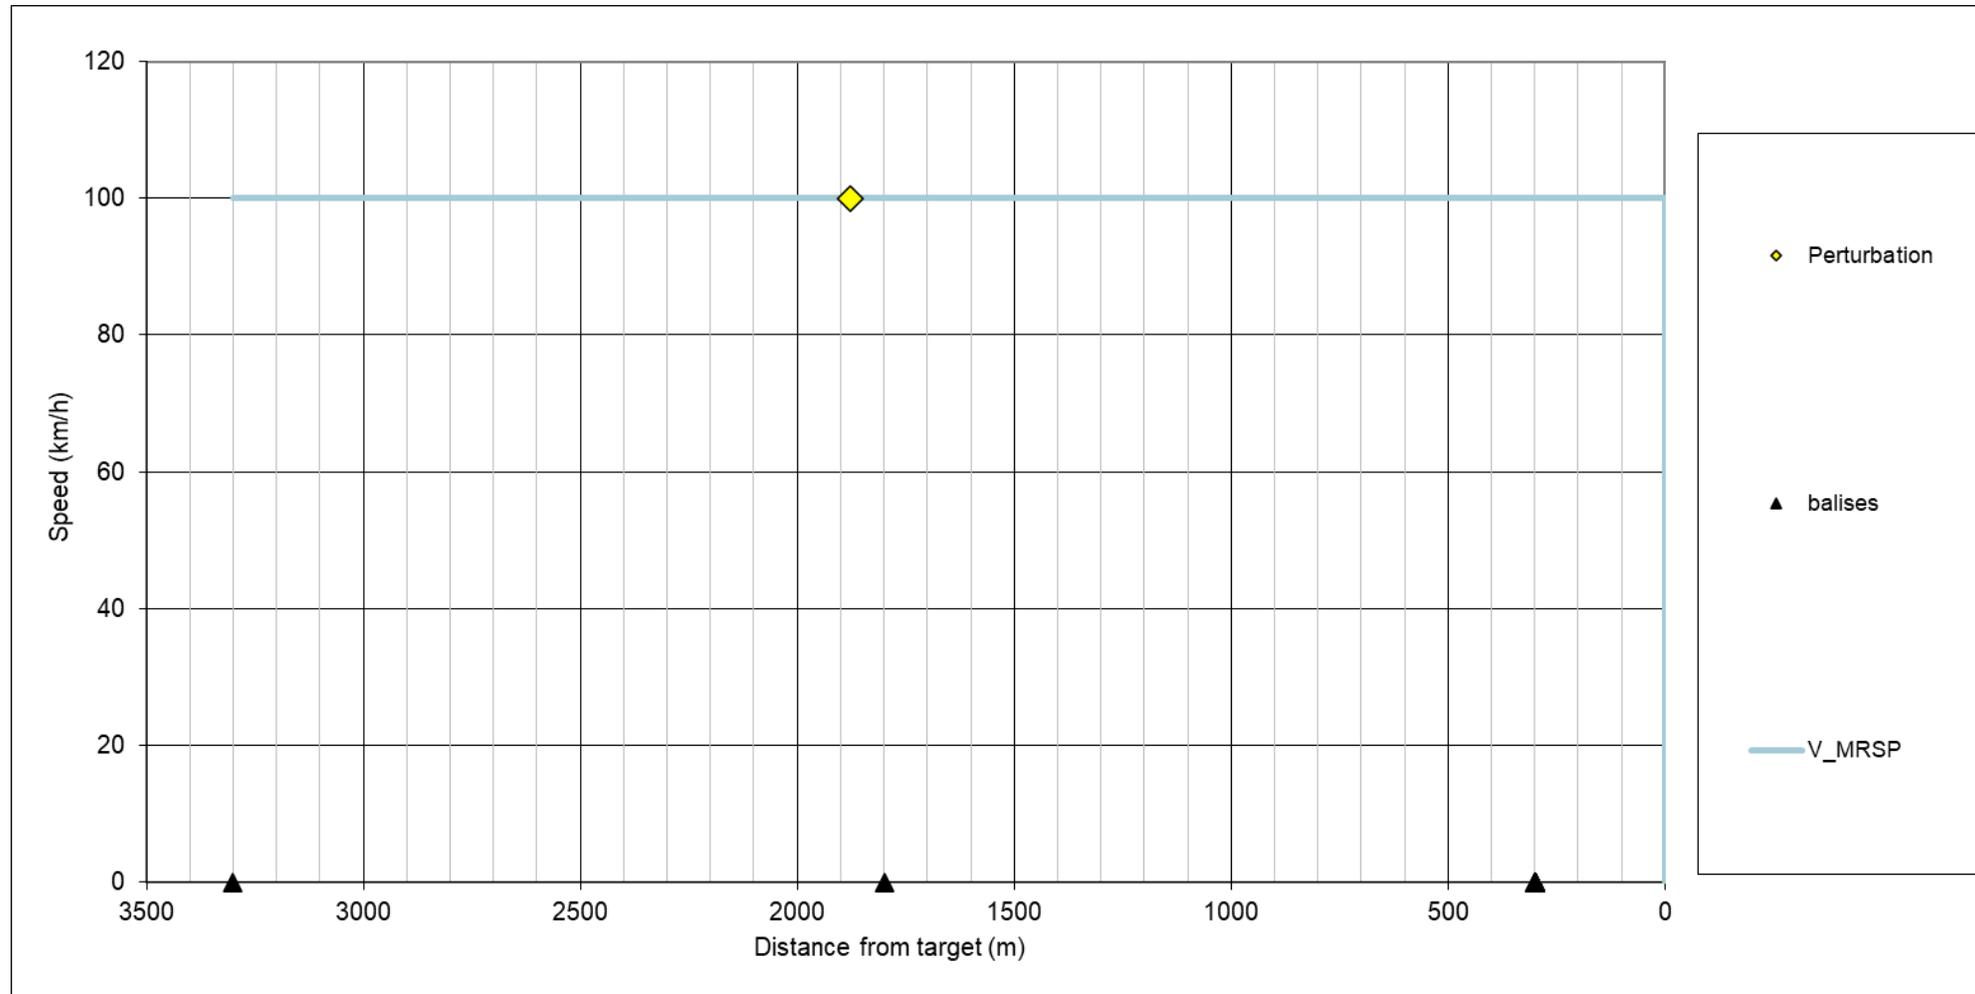

How can the braking curves be adapted to a more realistic behaviour of the RST?
» Better consideration of the actual train's deceleration (CR1385) «

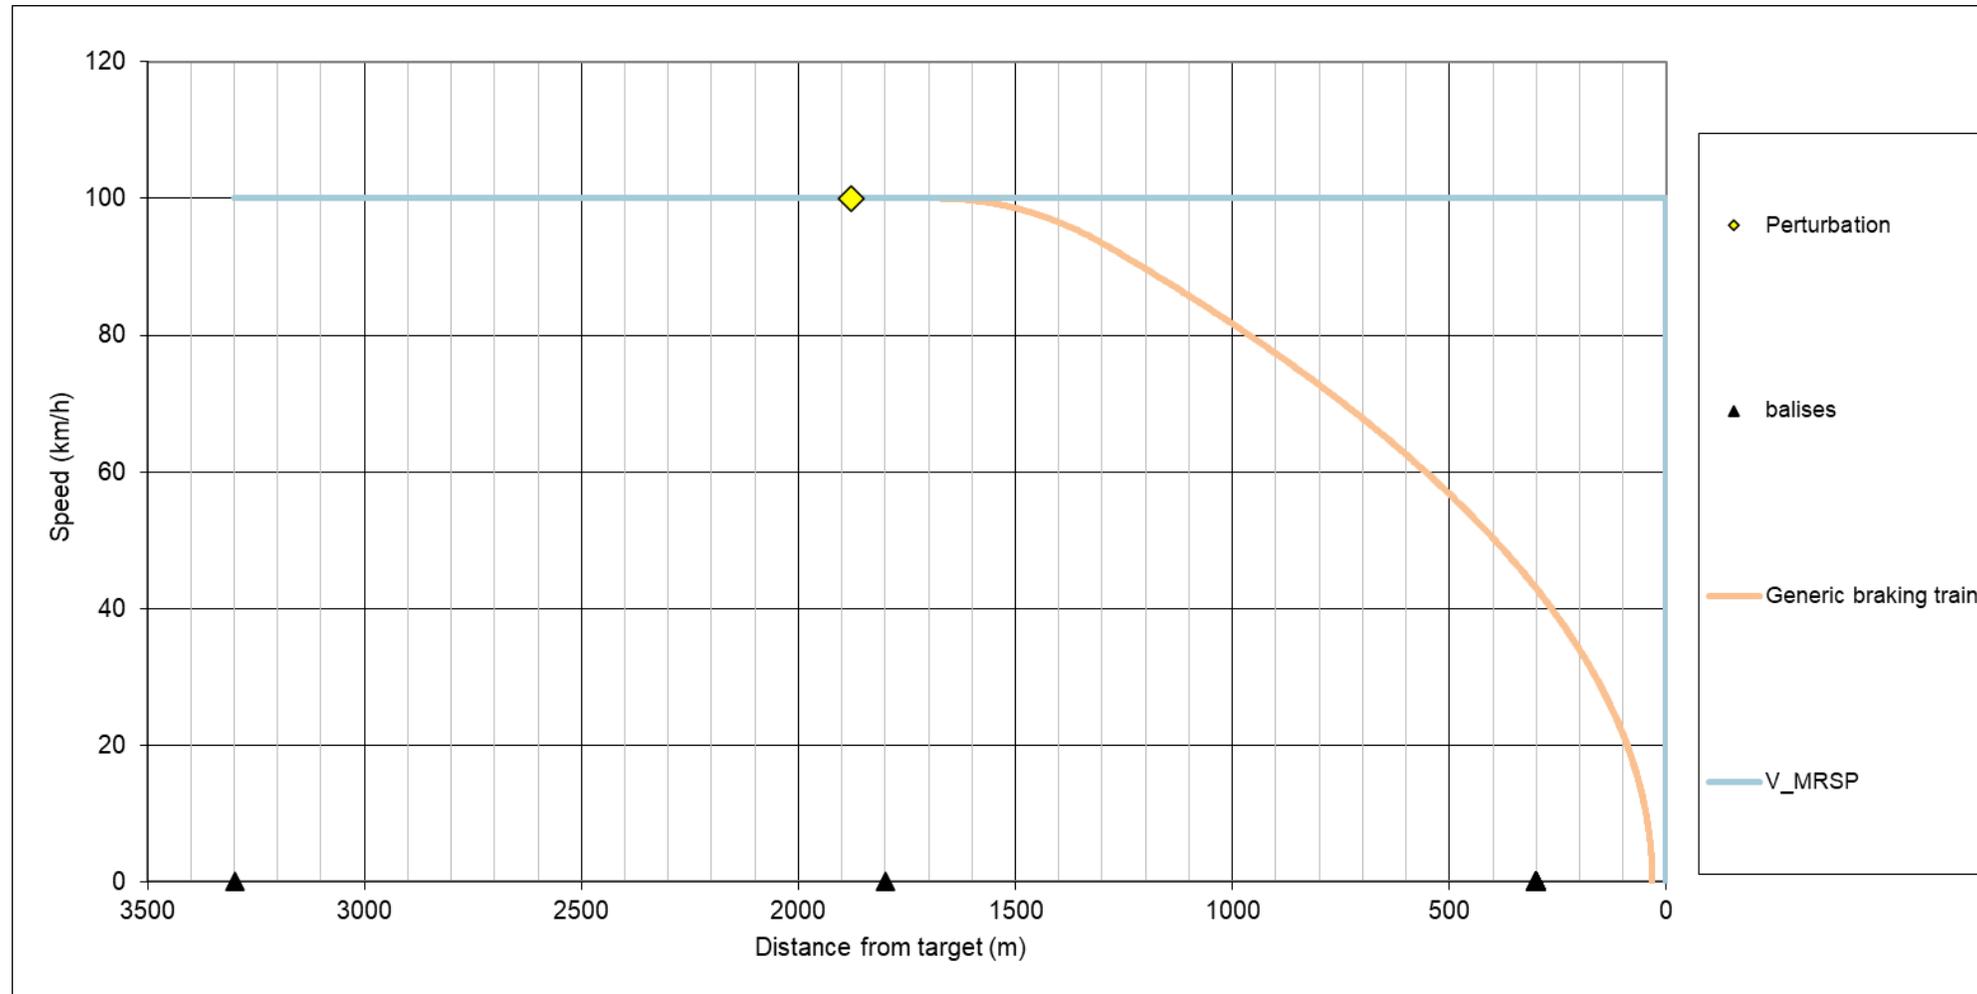

Will this train be braked by the B3R2 ETCS OBU?

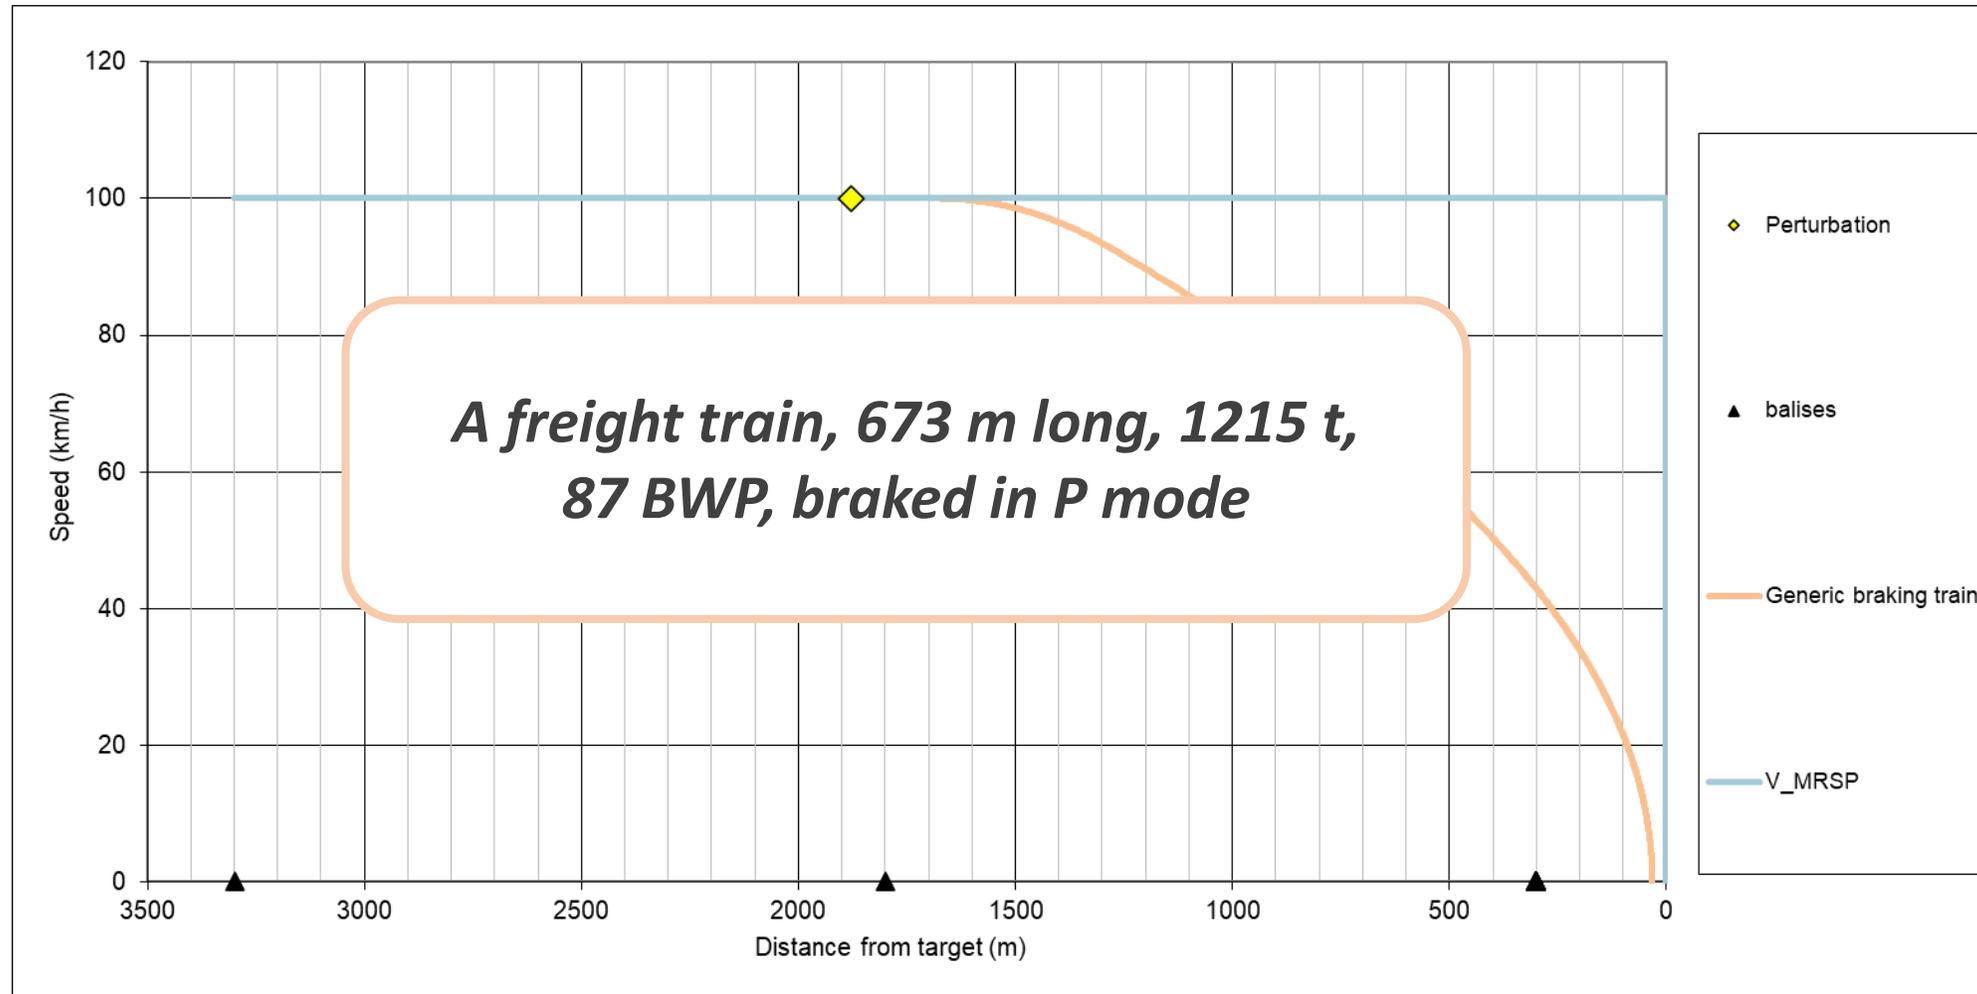

Will this train be braked by the B3R2 ETCS OBU?

Will this train be braked by the B3R2 ETCS OBU?

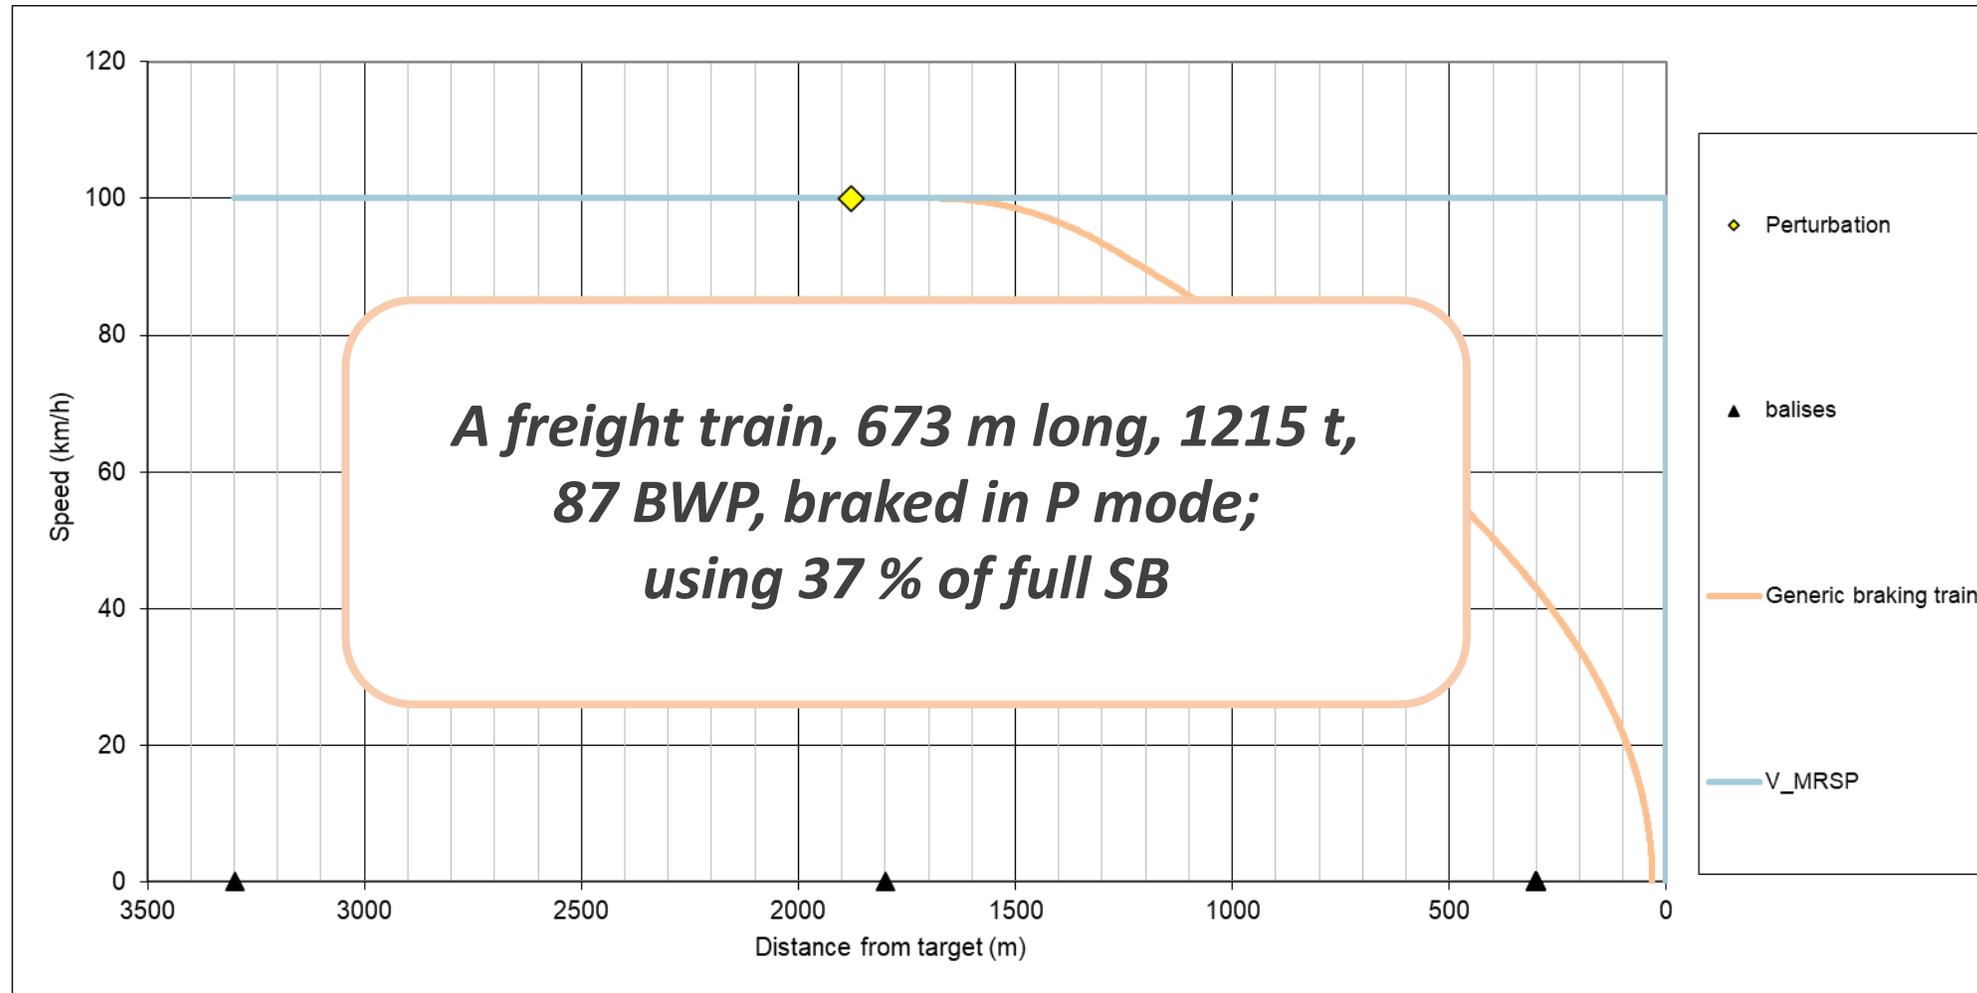

Will this train be braked by the B3R2 ETCS OBU?

Will this train be braked by the B3R2 ETCS OBU?

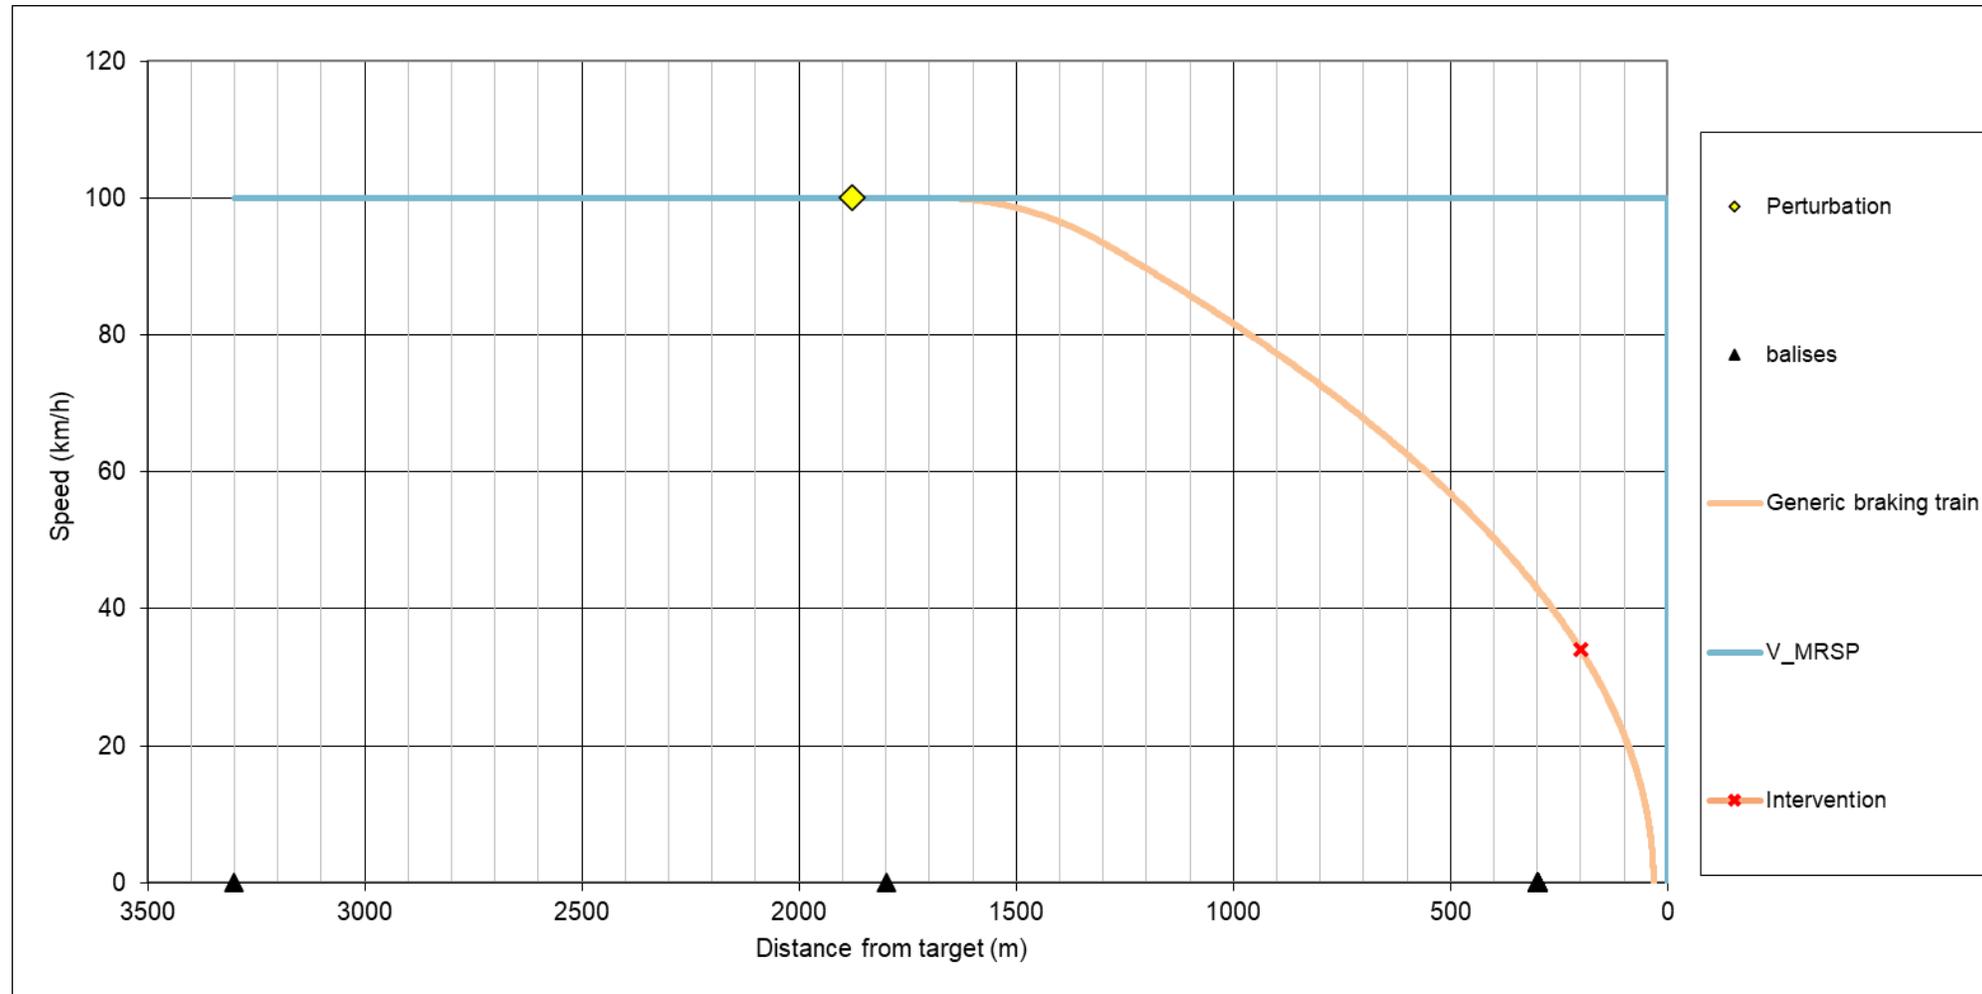

Will this train be braked by the B3R2 ETCS OBU?

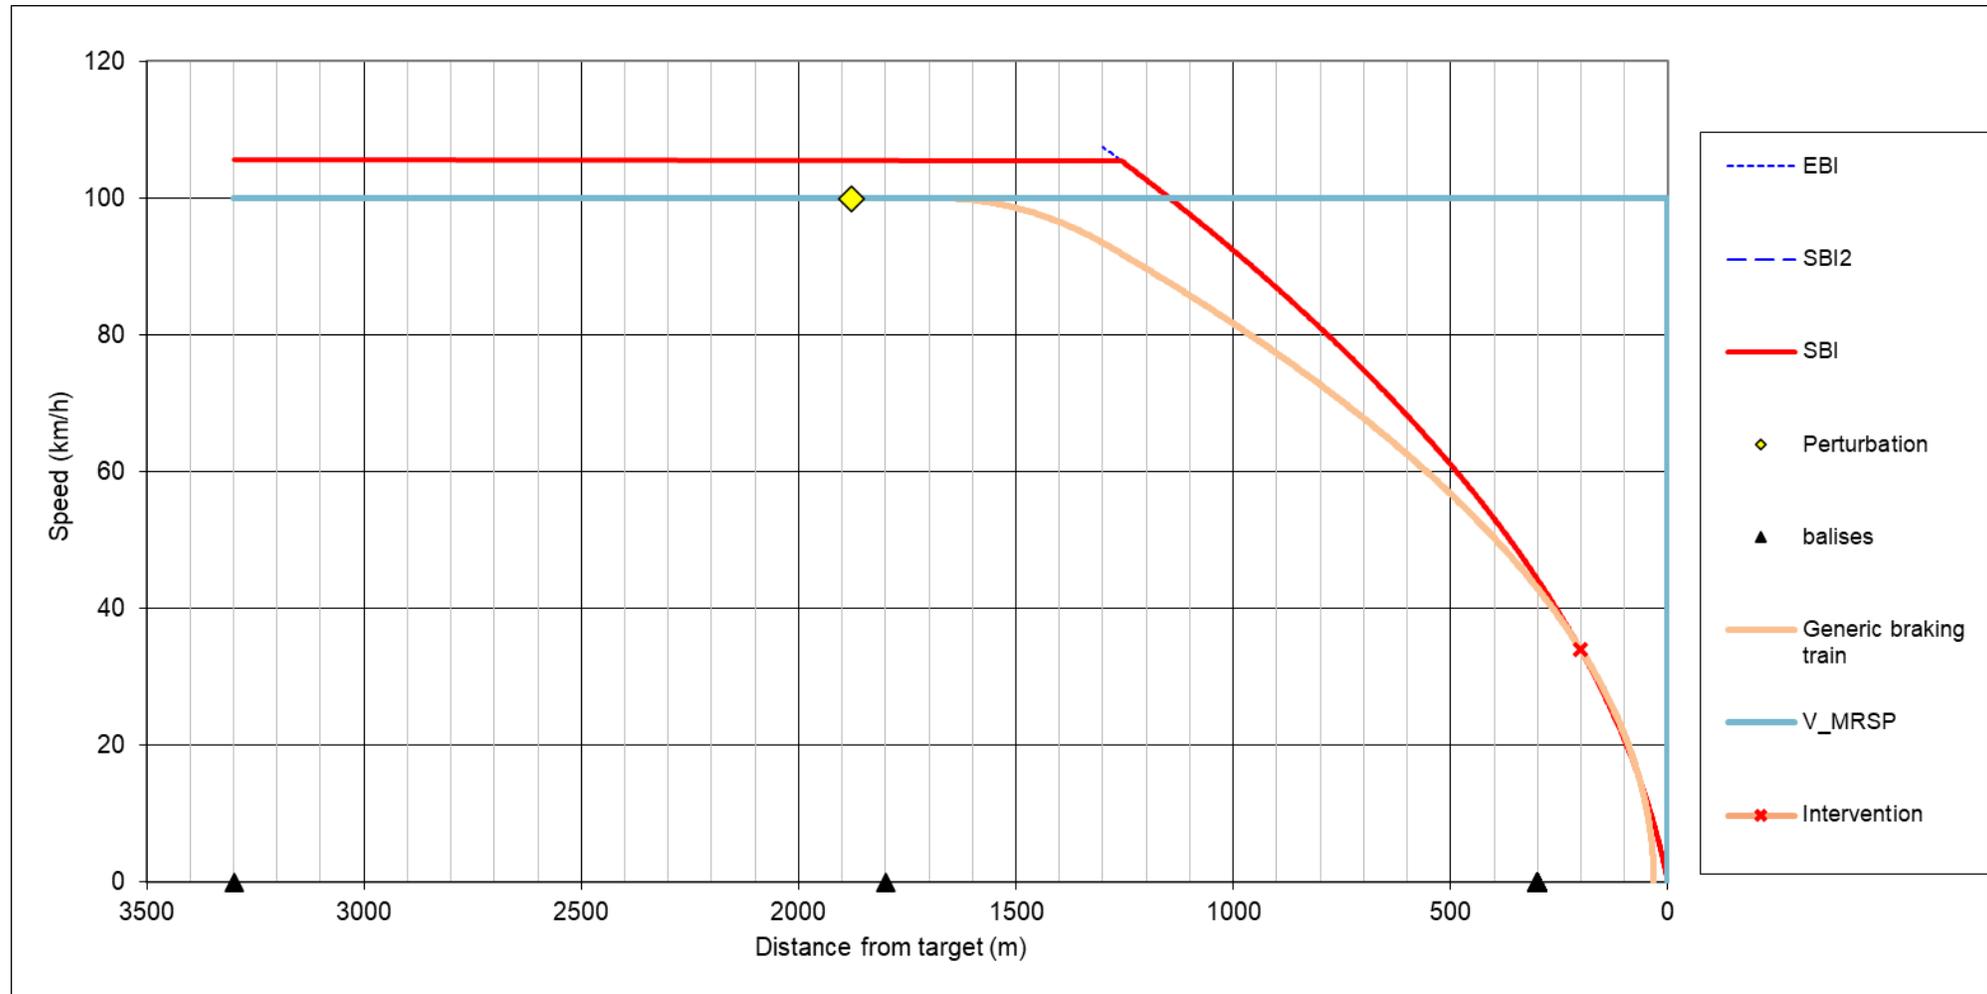

Will this train be braked by the B3R2 ETCS OBU?

Will this train be braked by the B3R2 ETCS OBU?

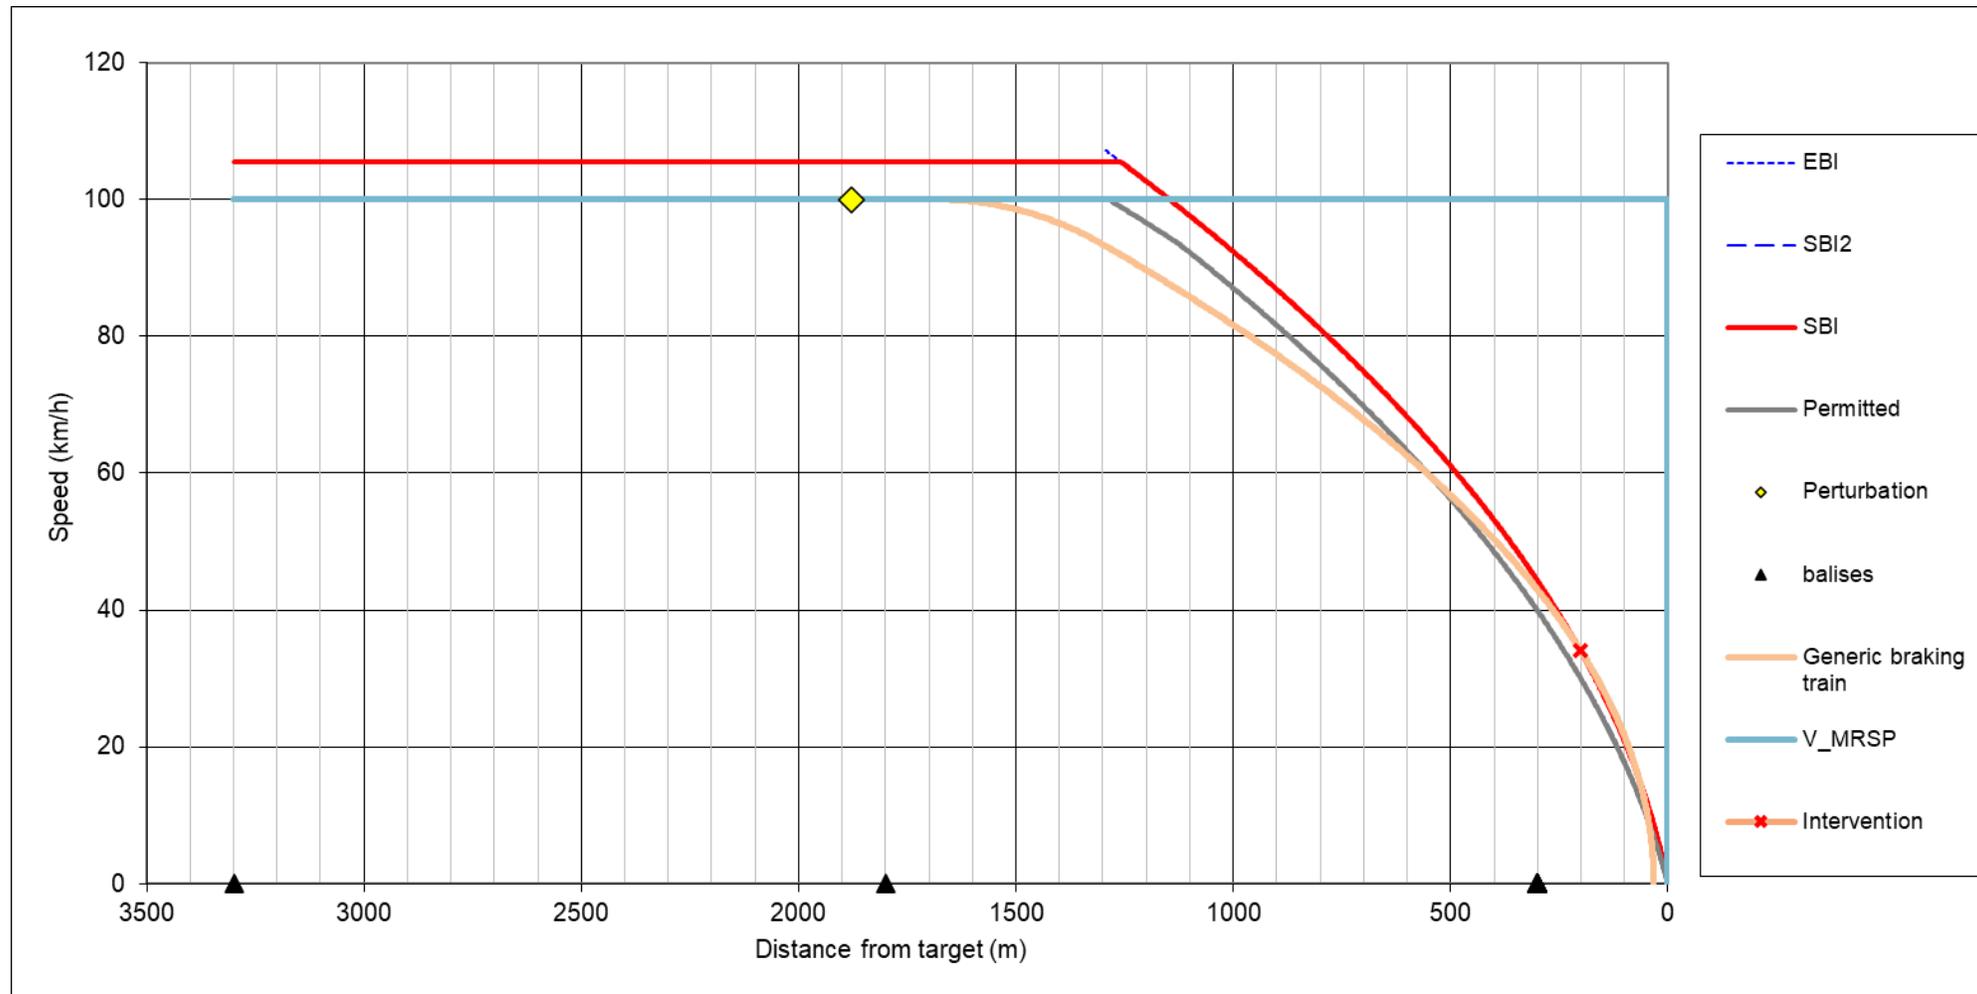

Will this train be braked by the B3R2 ETCS OBU?

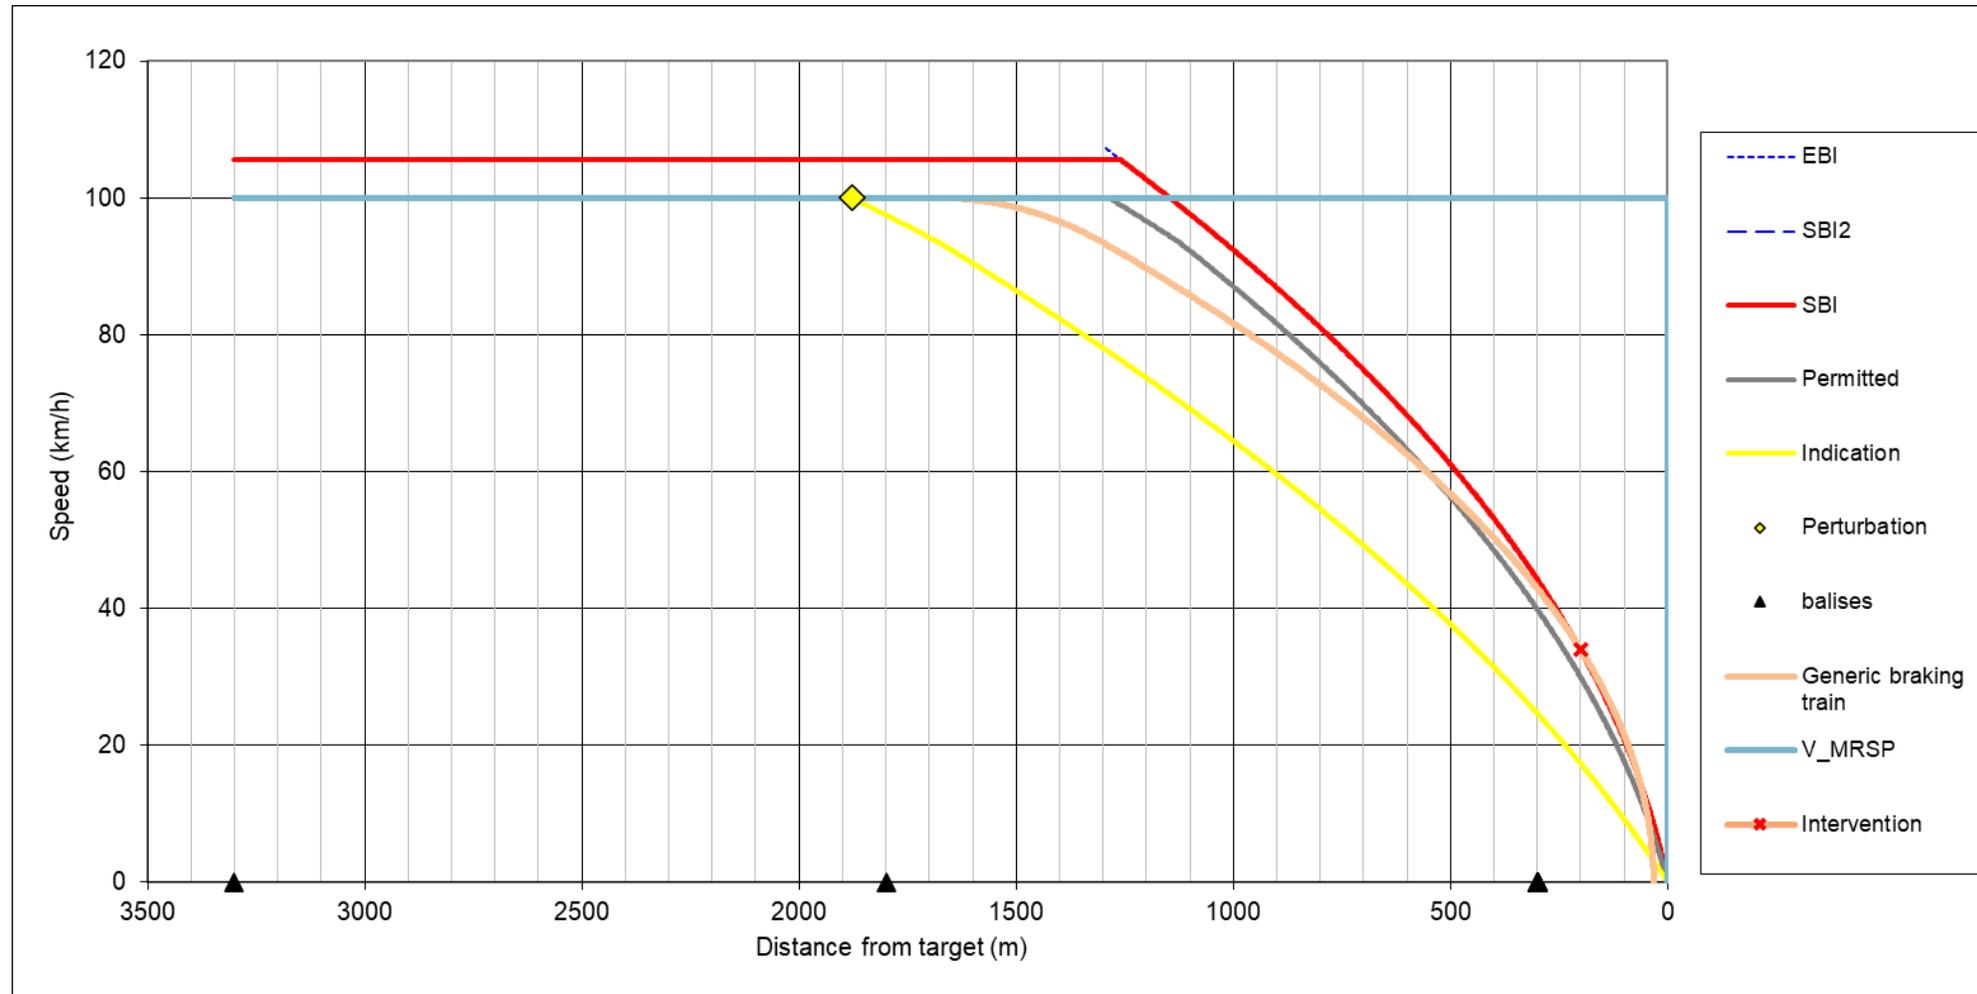

How can the braking curves be adapted to a more realistic behaviour of the RST?
» Better consideration of the actual train's deceleration (CR1385) «

Will this train be braked by the B3R2 ETCS OBU?

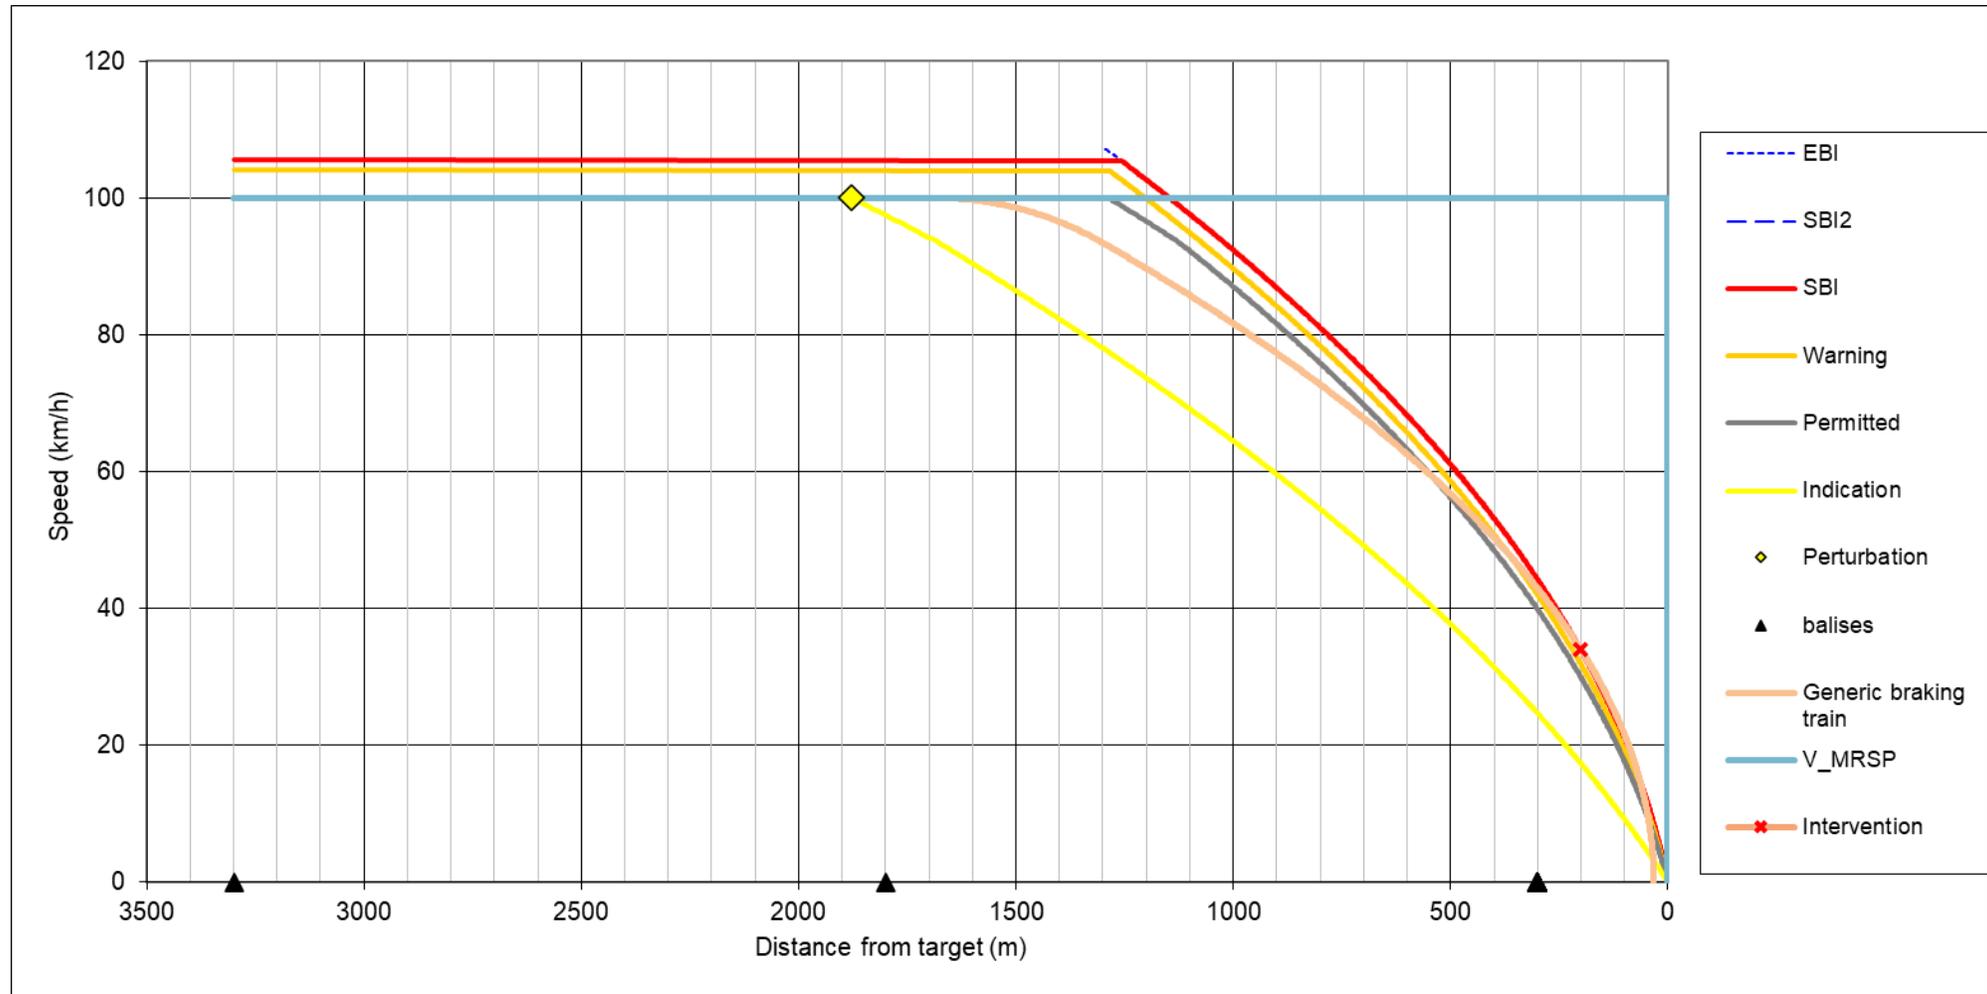

Will this train be braked by the B3R2 ETCS OBU?

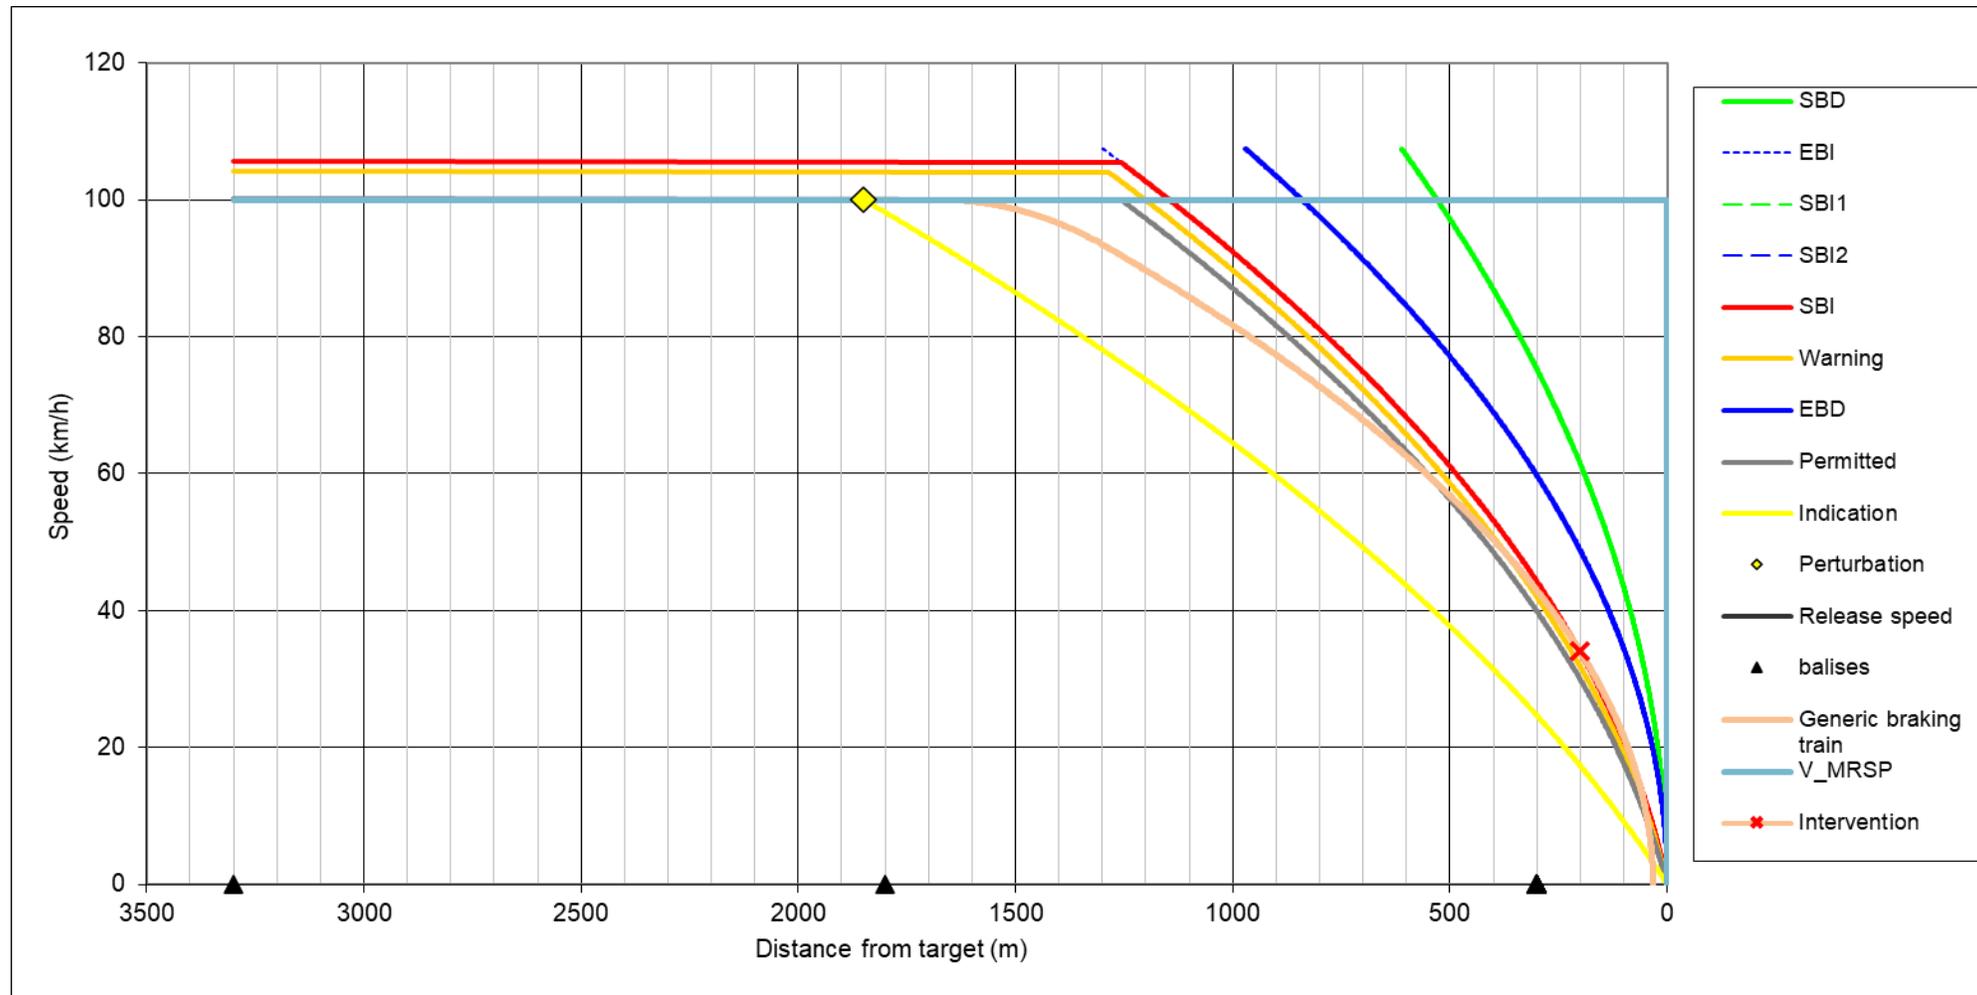

How can the braking curves be adapted to a more realistic behaviour of the RST?
» Better consideration of the actual train's deceleration (CR1385) «

Will this train be braked by the B3R2 ETCS OBU?

How can the braking curves be adapted to a more realistic behaviour of the RST?
» Better consideration of the actual train's deceleration (CR1385) «

Will this train be braked by the B3R2 ETCS OBU?

How can the braking curves be adapted to a more realistic behaviour of the RST?
» Better consideration of the actual train's deceleration (CR1385) «

B4R1 (reduced envelope up to SV 2.2/2.1) or B3R2

■ Will this train be further braked by the B3R2 ERTMS/ETCS OBU?

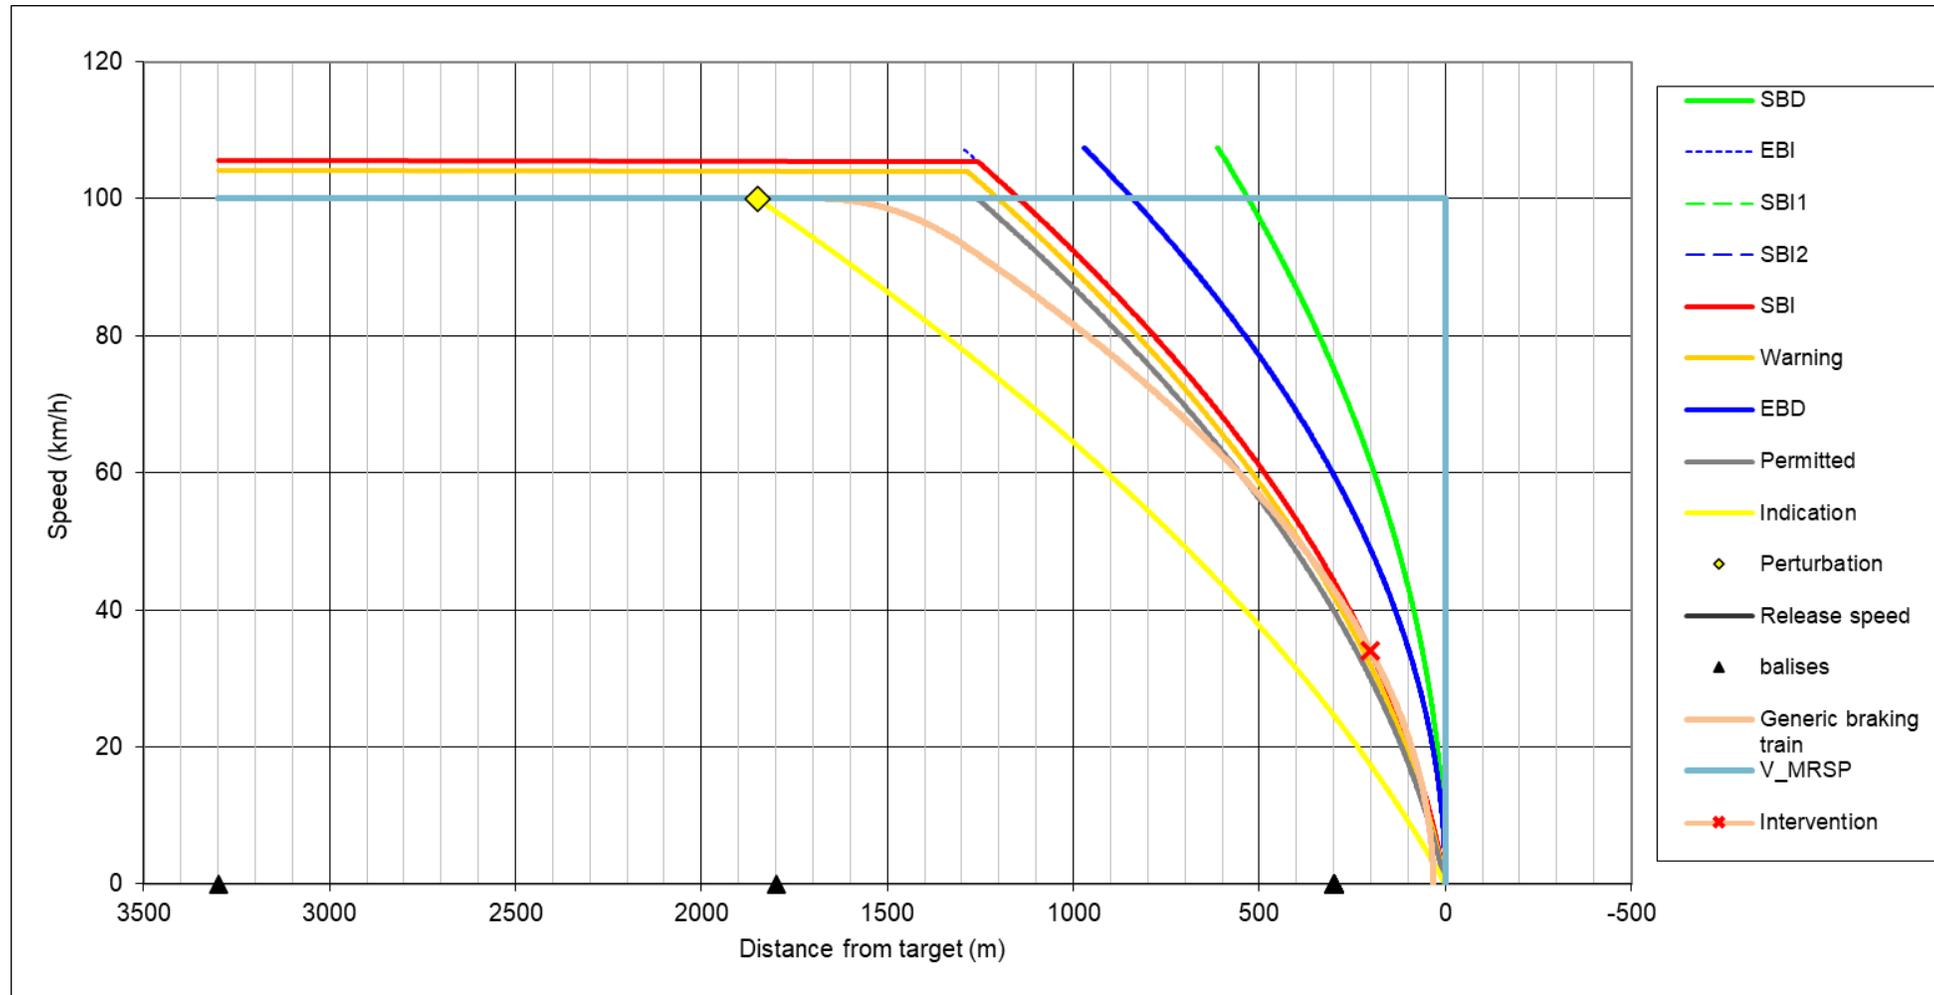

– Yes, it will 😞

– What can be done?

- OVL by construction (on the line)
- OVL by logic (in IXL)
- RS (computed by OBU OR given from the TRK) (+ OVL)
- Improving BC computations (the train can also already be braking) 😊

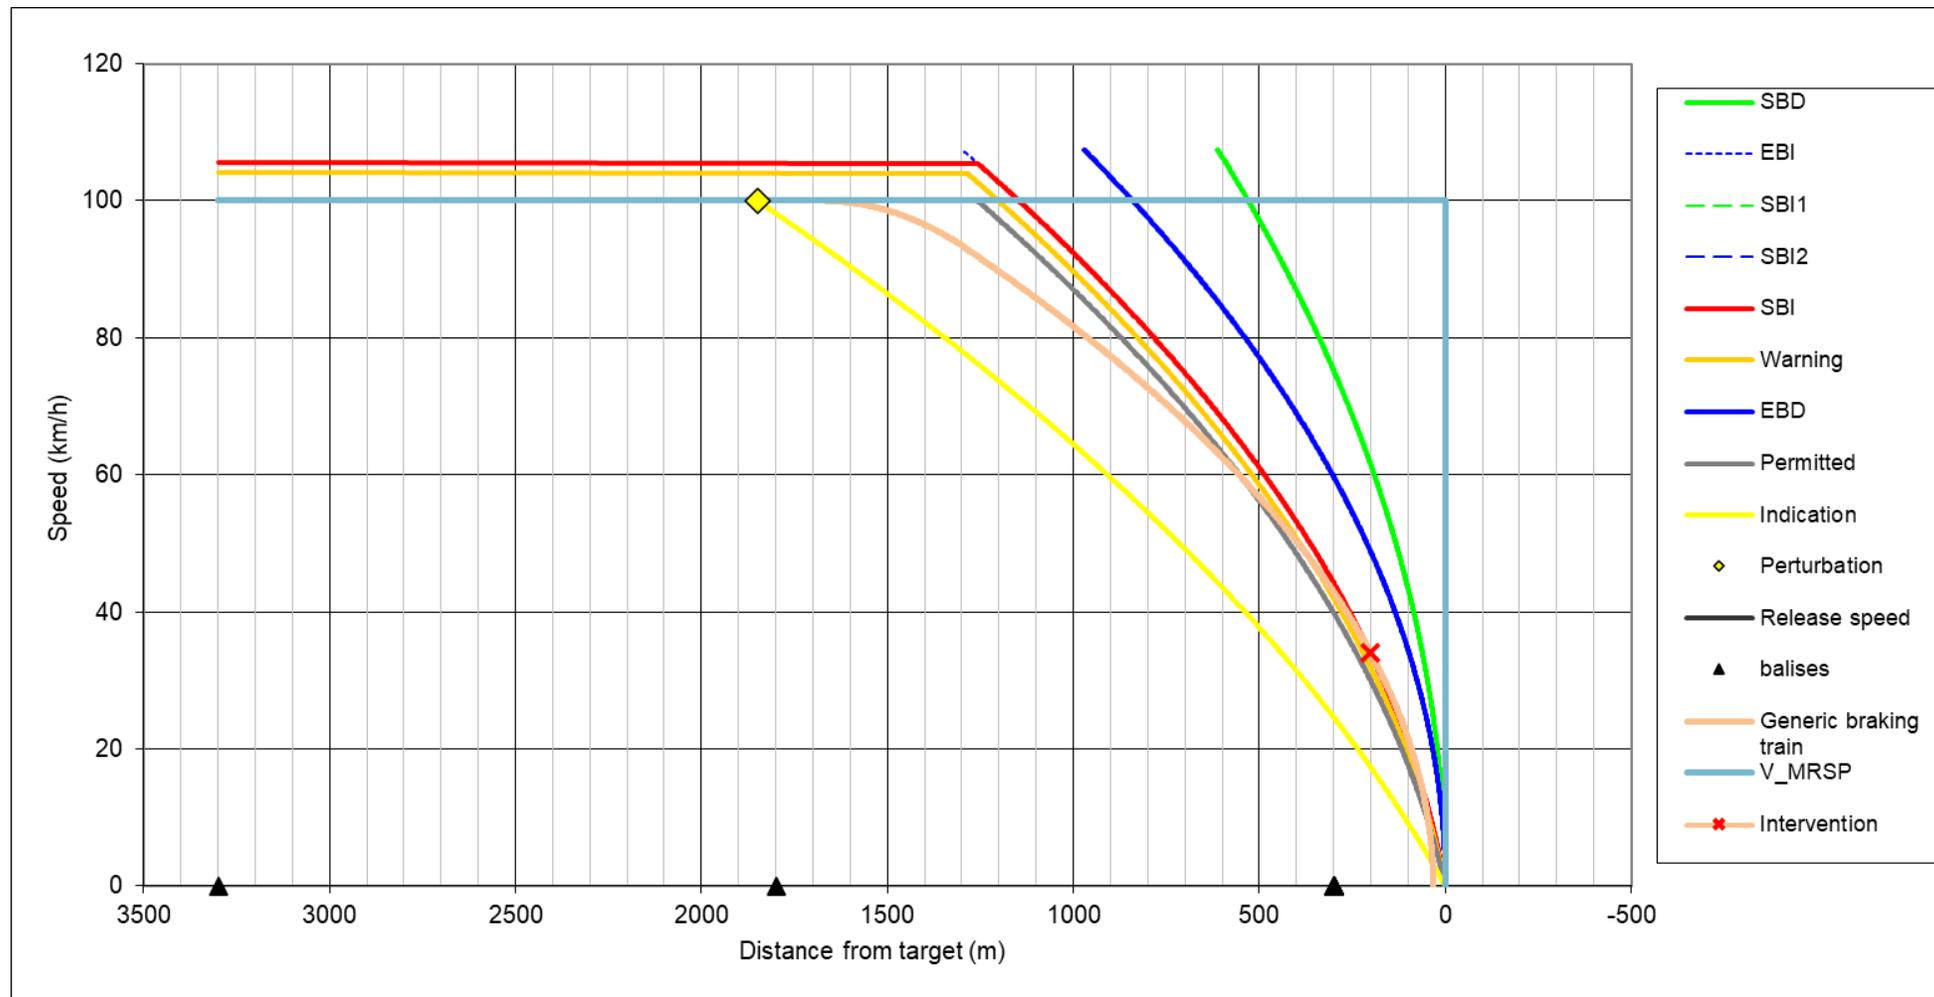

NOTE: We can also try to derive this with the audience; i.e., to remove it from here.

Will this train be braked by the B3R2 ETCS OBU?

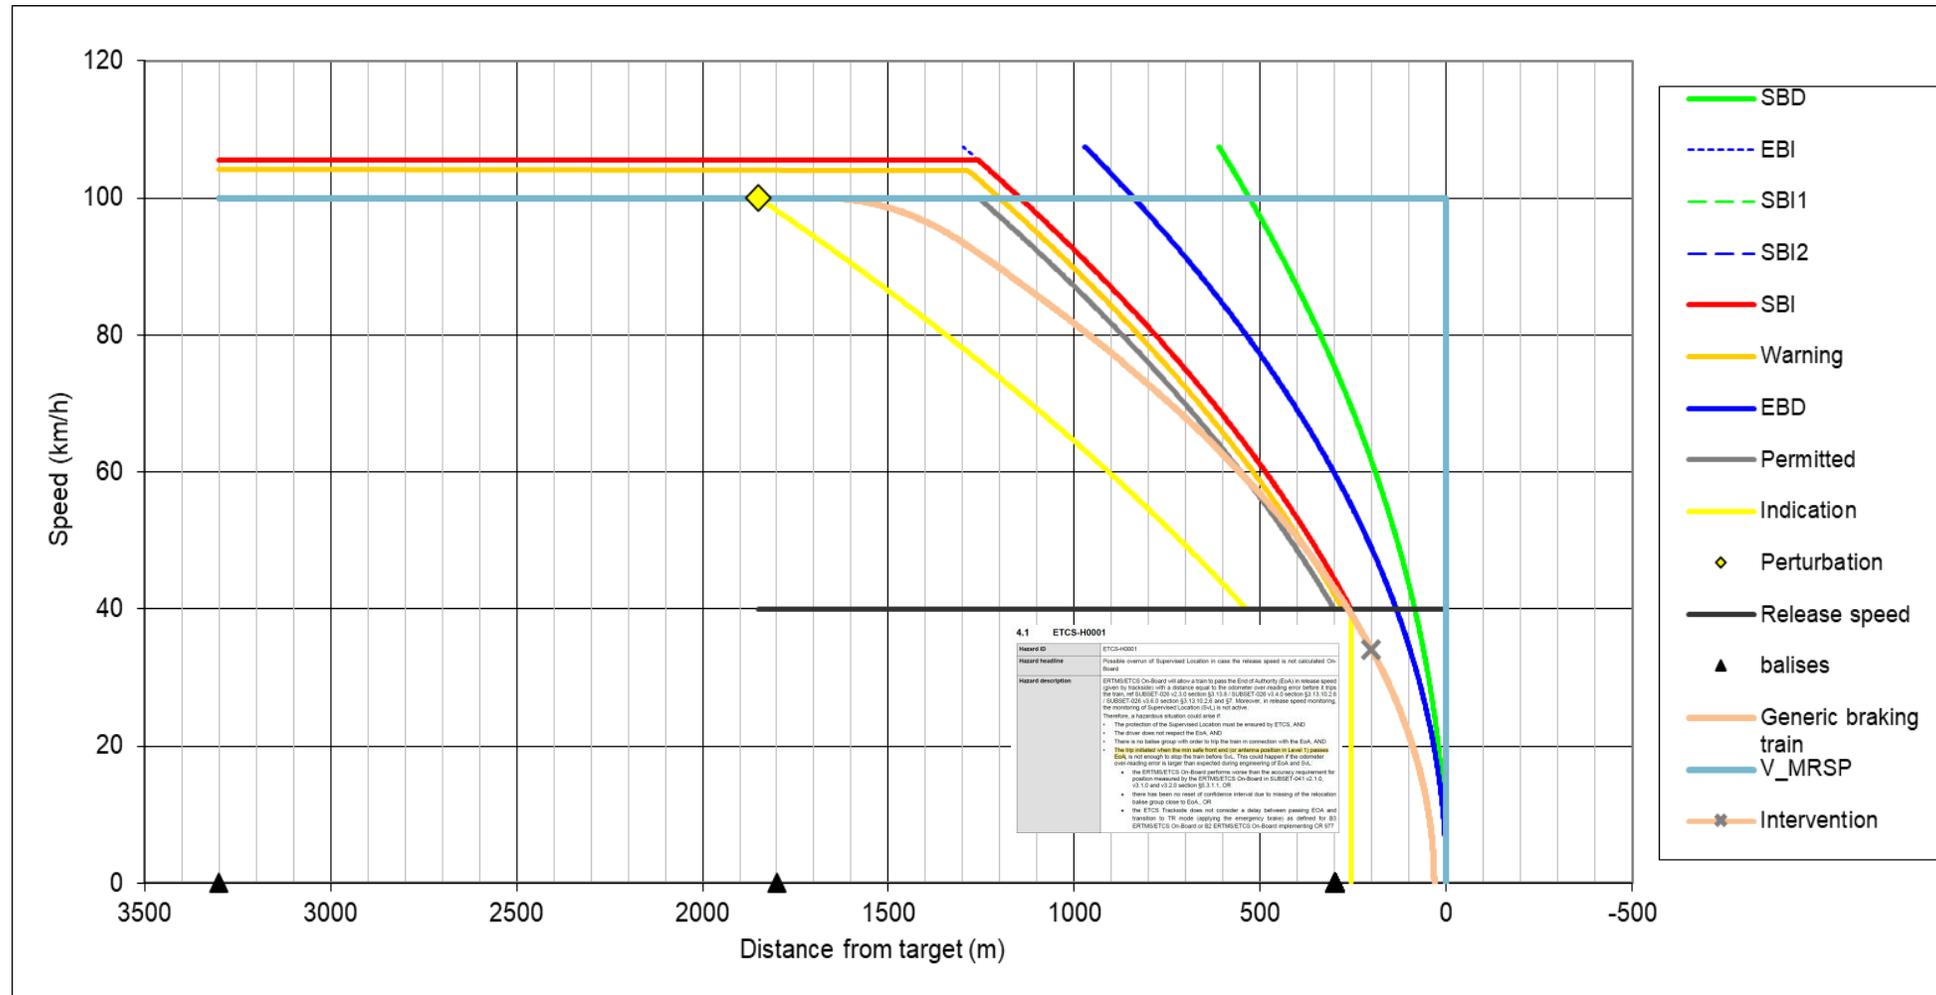

How can the braking curves be adapted to a more realistic behaviour of the RST?
» Better consideration of the actual train's deceleration (CR1385) «

Will this train be braked by the B3R2 ETCS OBU?

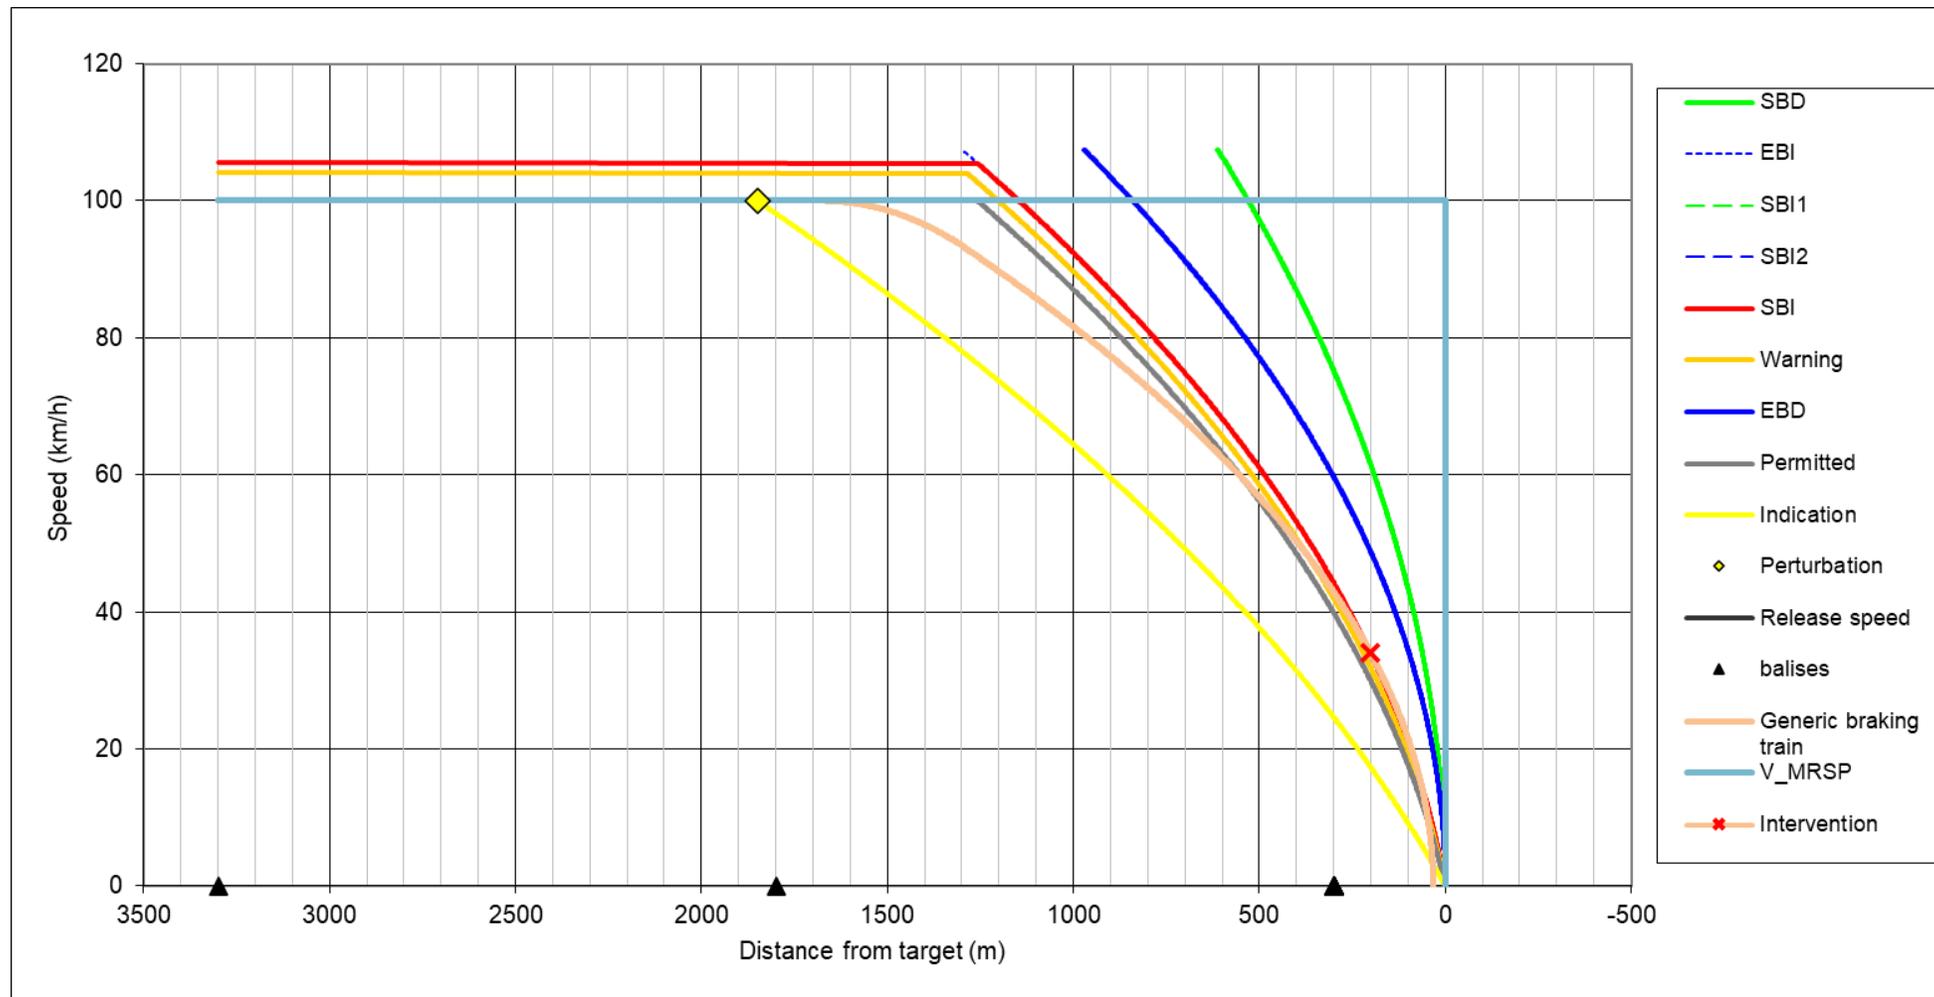

How can the braking curves be adapted to a more realistic behaviour of the RST?
» Better consideration of the actual train's deceleration (CR1385) «

Release speed (RS) 40 km/h – possible risk (H0001)

How can the braking curves be adapted to a more realistic behaviour of the RST?
 » Better consideration of the actual train's deceleration (CR1385) «

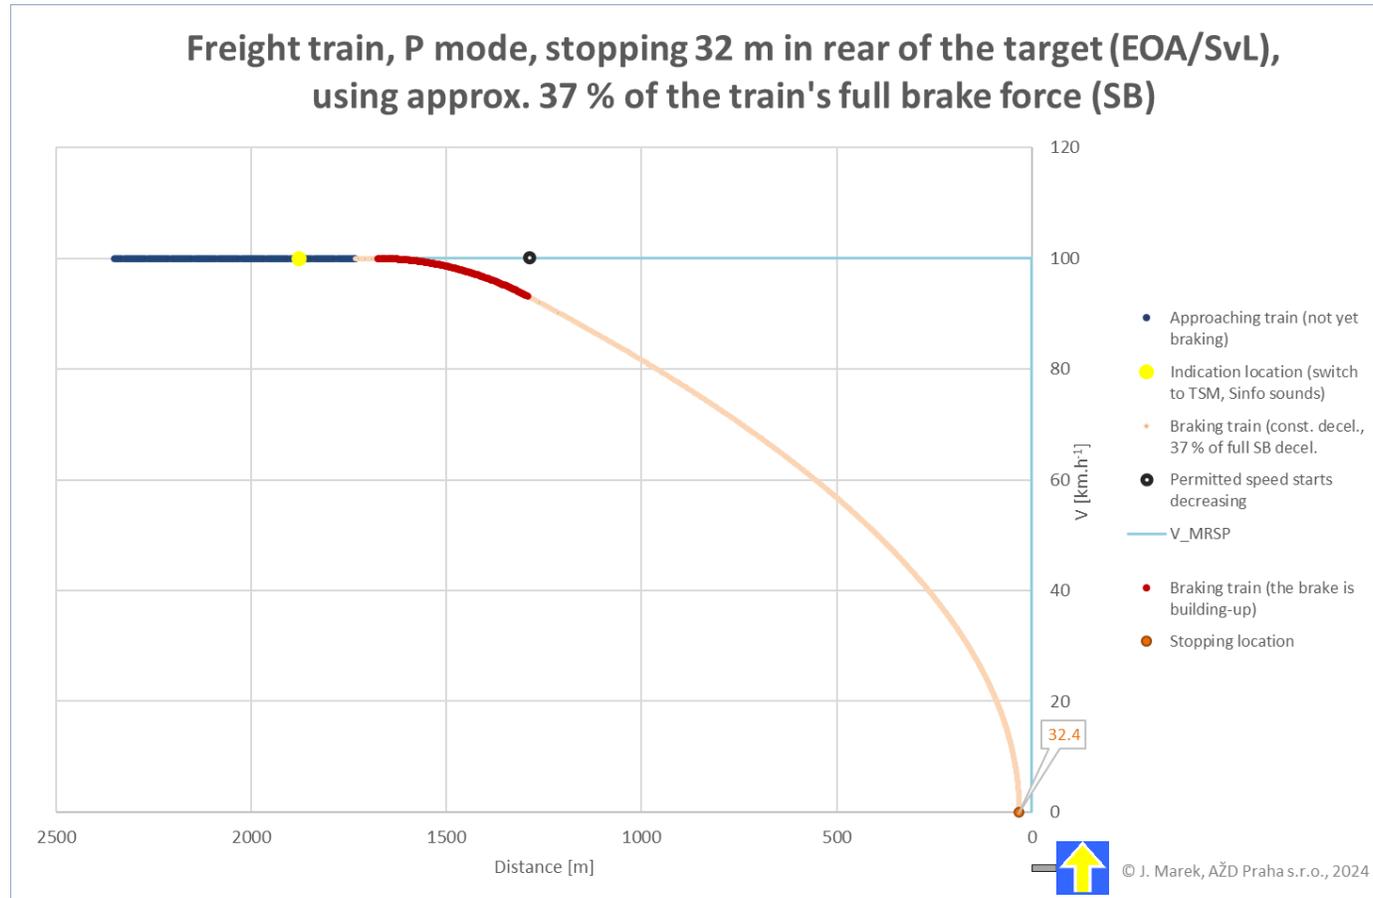

Will this train be braked by the B3R2 ETCS OBU?

How can the braking curves be adapted to a more realistic behaviour of the RST?
» Better consideration of the actual train's deceleration (CR1385) «

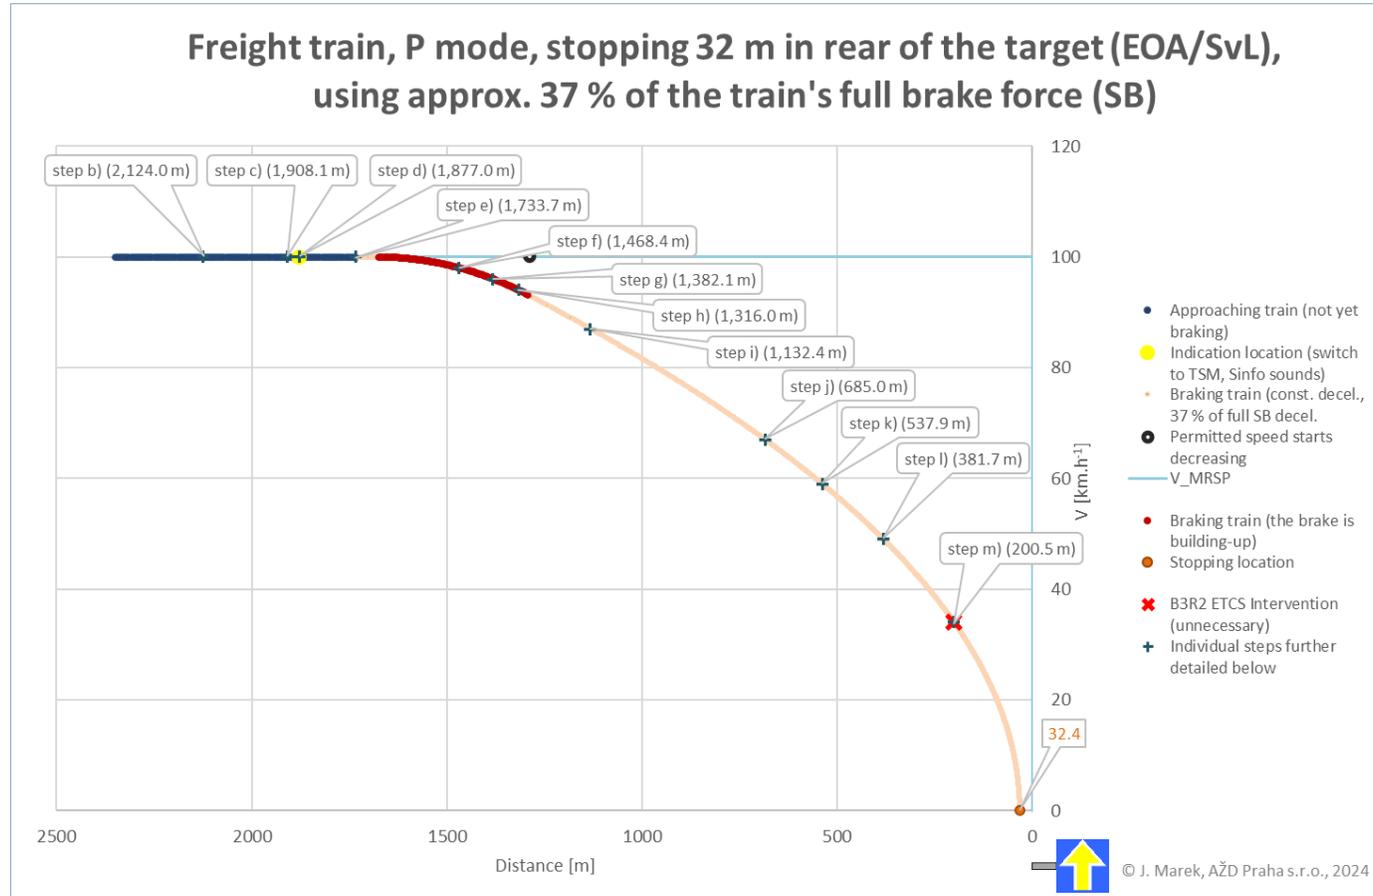

CR1385 (better handling with the measured decel.)

- Principle: For the trains braking enough (A_{est}), remove the ETCS BCs

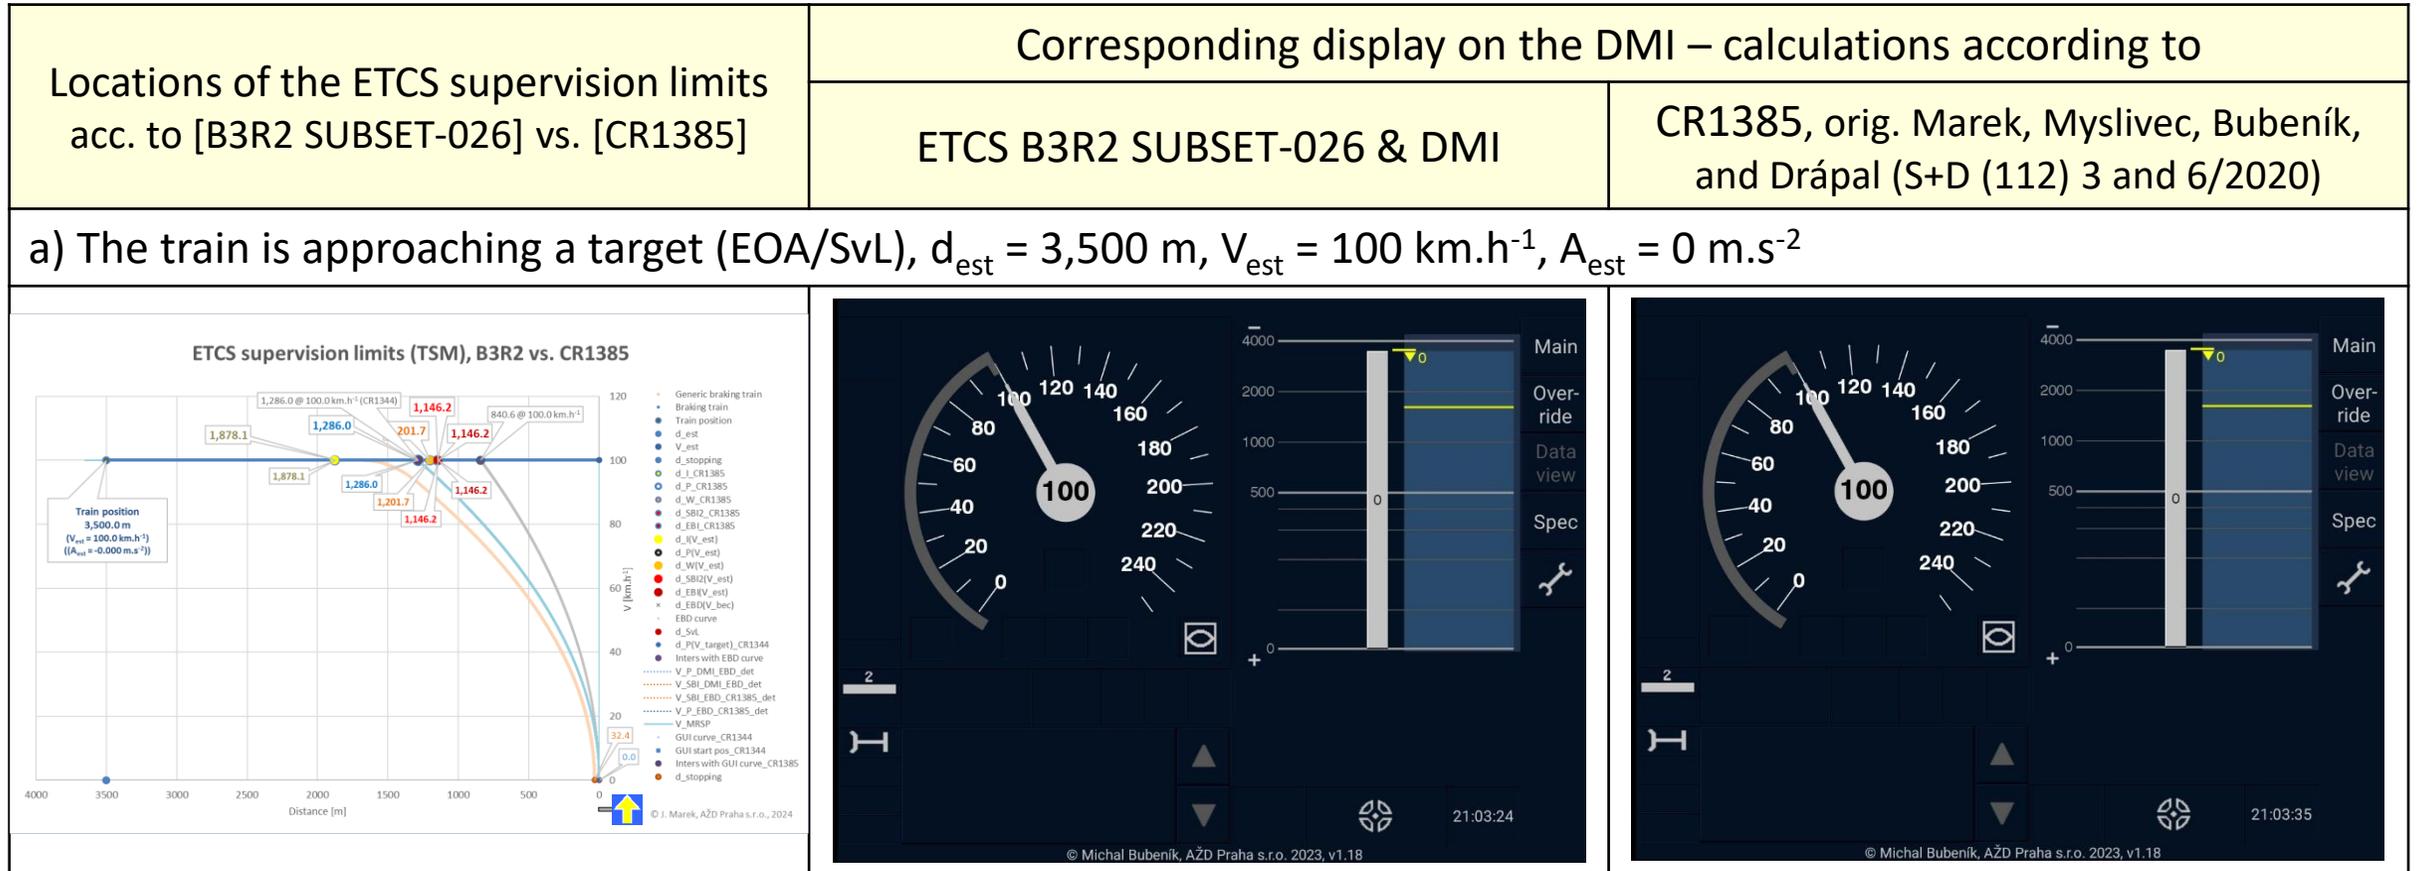

CR1385 (better handling with the measured decel.)

- Principle: For the trains braking enough (A_{est}), remove the ETCS BCs

CR1385 (better handling with the measured decel.)

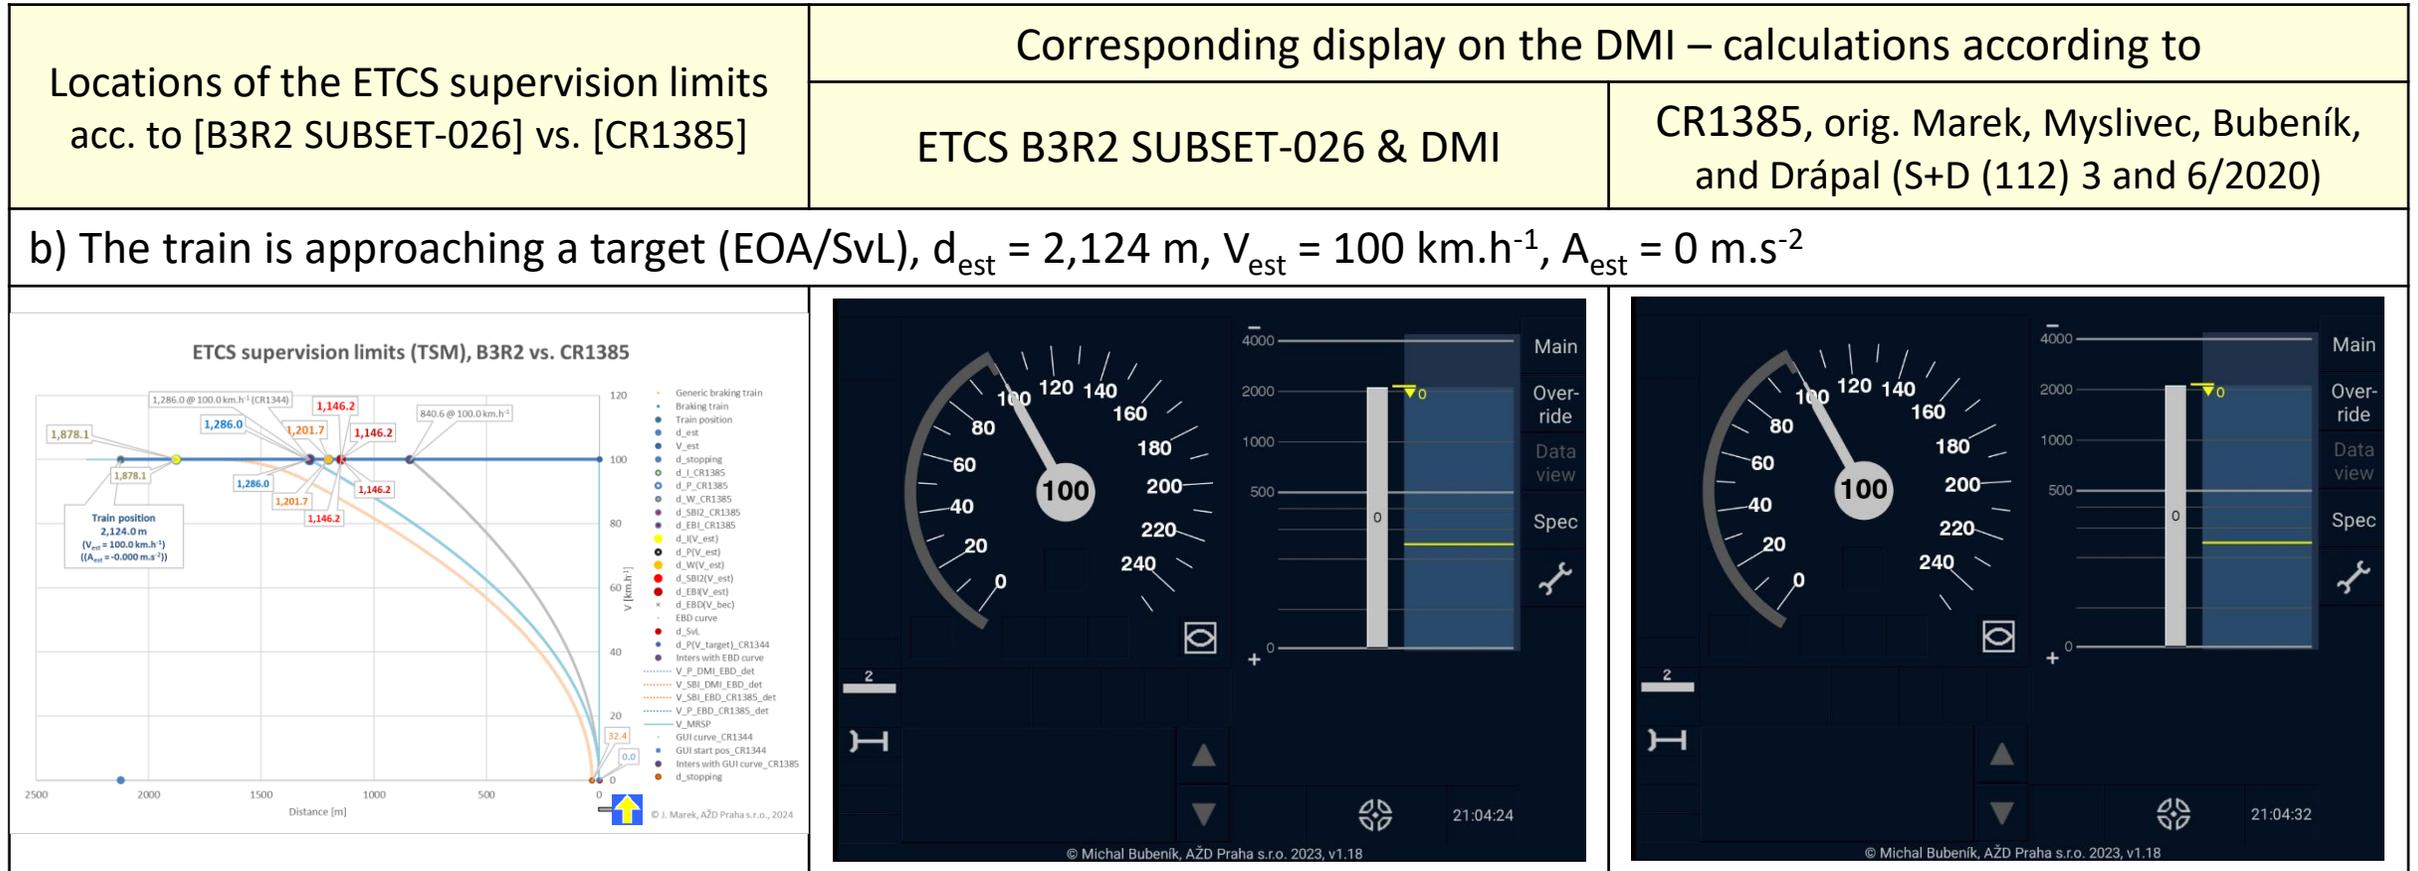

- Principle: For the trains braking enough (A_{est}), remove the ETCS BCs

How can the braking curves be adapted to a more realistic behaviour of the RST?
 » Better consideration of the actual train's deceleration (CR1385) «

CR1385 (better handling with the measured decel.)

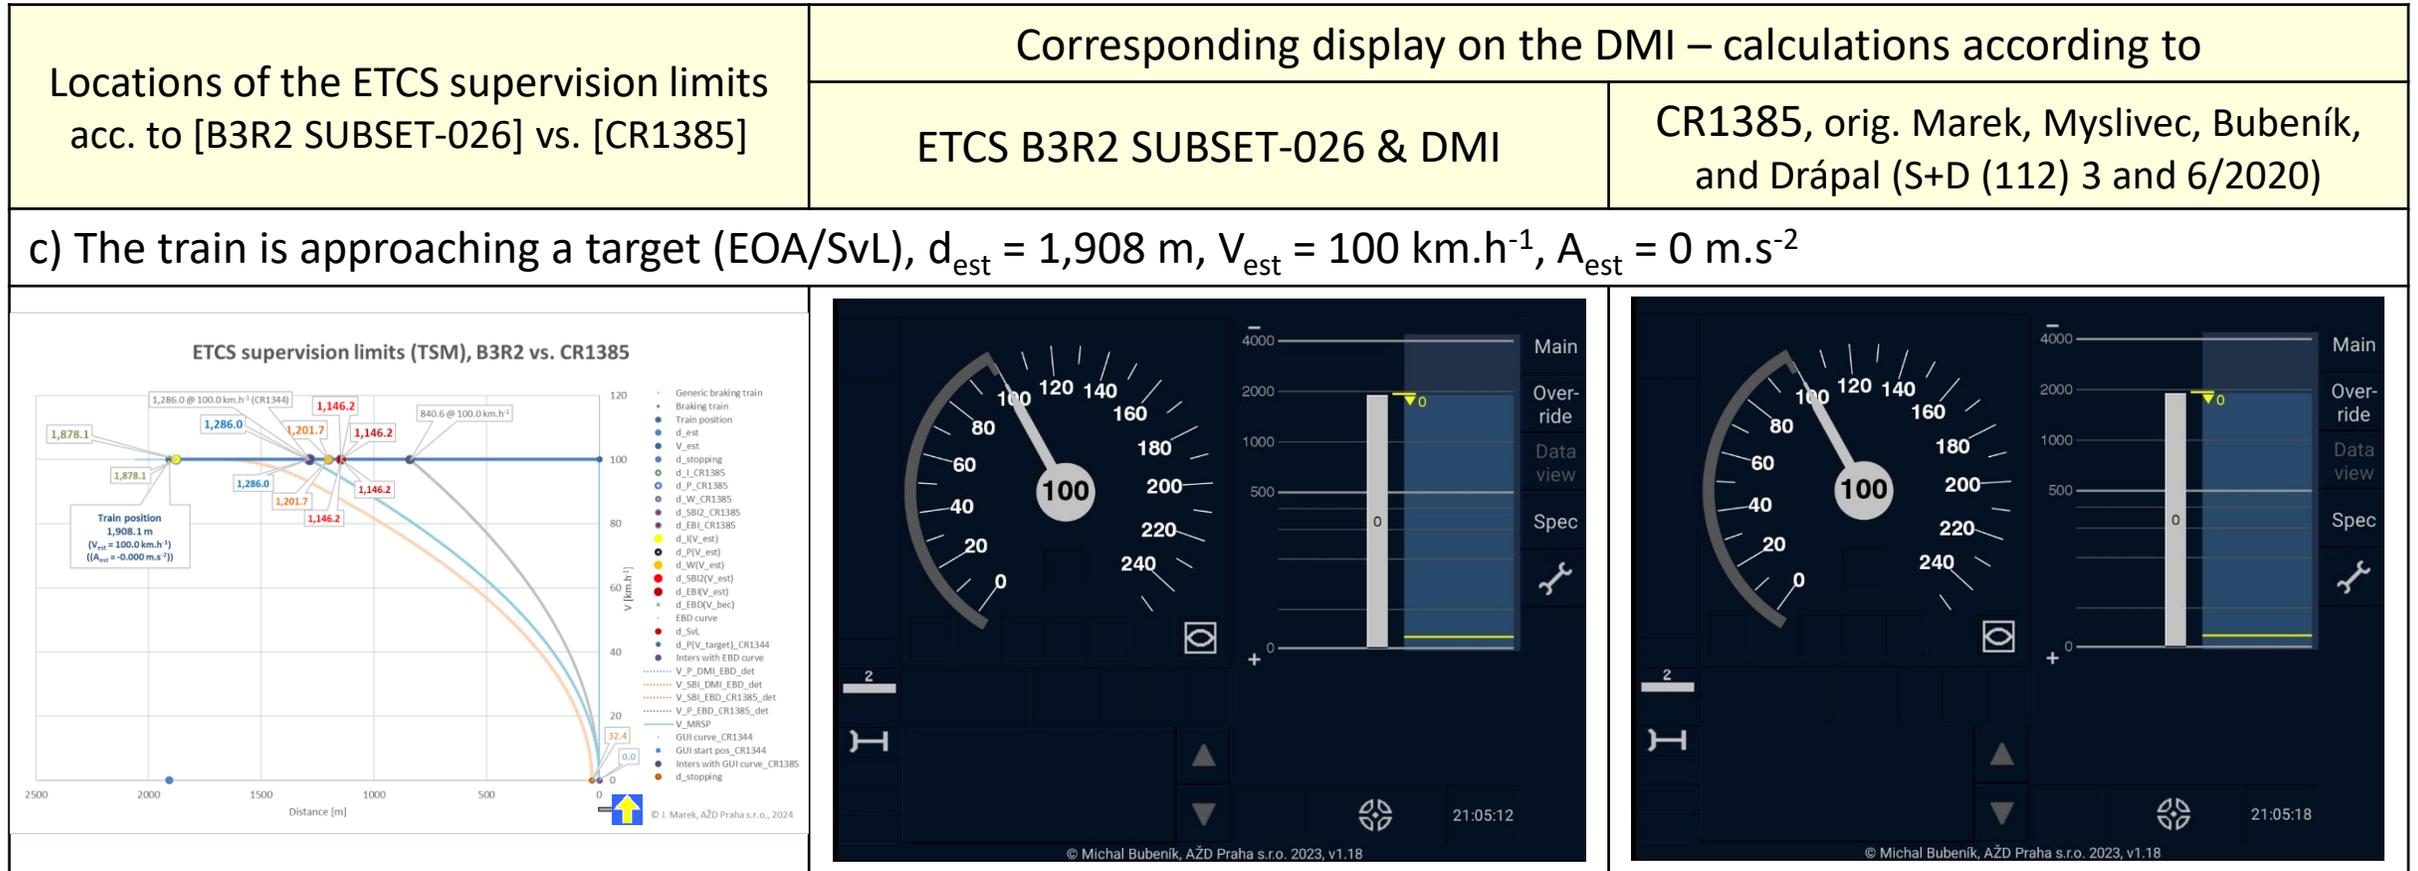

- Principle: For the trains braking enough (A_{est}), remove the ETCS BCs

How can the braking curves be adapted to a more realistic behaviour of the RST?
 » Better consideration of the actual train's deceleration (CR1385) «

CR1385 (better handling with the measured decel.)
